Lab contracts

The Albuquerque Tribune

Several Albuquerque companies were awarded contracts to provide pre-construction services for the \$29 million Joint Computational Engineering Lab at Sandia National Laboratories.

Nine prime contractors were awarded a total of \$270,000 to perform various pre-construction tasks.

Five of them are local: Brycon Corp., HB Construction of Albuquerque Inc., Jack B. Henderson Construction, Flintco Inc. and Jaynes Corp.

The new lab will be a state-of-the art facility for research, development and application of high-performance computer and communications technologies. Sandia will be able to exchange data and information at a high level with private industry, university partners and other national labs.
