

Sandia National Laboratories

Energy Storage Analytics

Ray Byrne, Ph.D., FIEEE
Manager, Power Electronics & Energy Conversion systems

2021 DOE Office of Electricity Energy Storage Program Peer Review
October 25-27, 2021

Acknowledgment: This work was supported by the U.S. Department of Energy Office of Electricity Energy Storage Program under the guidance of Dr. Imre Gyuk

Sandia National Laboratories is a multimission laboratory managed and operated by National Technology & Engineering Solutions of Sandia, LLC, a wholly owned subsidiary of Honeywell International Inc., for the U.S. Department of Energy's National Nuclear Security Administration under contract DE-NA0003525.

SAND2021-13568 C

Energy Storage Analytics Session

Ray Byrne (SNL), Session Lead and Program Overview

- *Di Wu (PNNL), Energy Storage Evaluation Tool (ESET)*
- *Jan Alam (PNNL), Energy Storage Controls and Hybridization Related Efforts at PNNL*
- *Dhruv Bhatnagar (PNNL), Energy Storage Long-Term Expansion Planning*
- *Tu Nguyen (SNL), Long Duration Storage for Dispatchable Renewable Generation and QuEST Updates*
- *Walker Olis (SNL), Energy Storage System Modeling for Extreme Climates*
- *Richard Baxter (Mustang Prairie), Energy Storage Financing Study & Energy Storage Pricing Study*
- *Hisham Othman (Quanta Technology), Probabilistic Integrated Resource Planning Tool*

Energy Storage Analytics

Estimating the value of energy storage

- Market areas
- Vertically integrated utilities
- Open source SW tools

Control strategies for energy storage

- Wide area damping control, transient stability
- Maximizing revenue

Public policy: identifying and mitigating barriers

Standards development

Project evaluation

- Technical performance
- Financial performance

Model development (e.g., for dynamic simulation)

Research Priorities

Decarbonization – the transition to a decarbonized grid will require significant energy storage investments

- Longer duration energy storage (how much, where?)
- Energy storage will become an important part of the expansion planning process, tradeoffs between storage, curtailment of renewables, and transmission
- Electrification of transportation will require distribution system upgrades and/or energy storage deployments as well as tighter integration of transmission/distribution planning
- Impacts of climate change, extreme climates, impact energy storage sizing decisions

Energy and Environmental Equity

- Quantify how energy storage deployments can improve energy and environmental equity

Research Priorities

Energy Storage Finance

- Identifying and reducing barriers to project finance
- Pricing surveys to improve storage cost transparency
- Organize two energy storage finance summits each year

Control Systems for Energy Storage

- Control laws unlock the value/benefit of energy storage systems
- Represent potential new value streams
- As we decarbonize, reductions in inertia and transient stability will become more important

Open Source Tools for Energy Storage Analysis

- Energy Storage Evaluation Tool (ESET), PNNL
- QuEST, SNL
- Probabilistic Integrated Resource Planning, Quanta

Resilience

- Sizing, placement and valuation of storage to enable resilience (and other factors like equity, decarbonization, etc.)
- Storage as a black start resource
- Microgrid energy storage design tools
