Developing Energy Storage Systems Capabilities in Singapore

Acknowledgment: This work was supported by the DOE energy storage program under the guidance of Dr. Imre Gyuk.
EMA regulates and develops the power sector in Singapore.

1. EMA is the lead agency of Singapore responsible for regulating and developing the electricity and gas sectors in Singapore.

2. EMA aims to develop capabilities and facilitate the development of Energy Storage System (ESS) technologies that will enhance the overall stability and resilience of the power system.

3. In the next 2 years, the EMA will work closely with the U.S. Sandia National Labs to:
   - Draw insights from the test-bed data to establish the business case for deploying ESS pervasively in Singapore,
   - Establish enabling grid-installation guidelines and fire-safety codes for Singapore; and
   - Organise technical workshops to bootstrap the understanding of Singapore’s local community to safely deploy ESS.
