Chapter 1

Thermo-chemical software library

Authors

Cosmin Safta, Habib Najm, Omar Knio

The TChem toolkit is a software library that enables numerical simulations using complex chemistry and facilitates the analysis of detailed kinetic models. The toolkit provides capabilities for thermodynamic properties based on NASA polynomials, kinetic model reaction rates (both for individual reactions and for species). It incorporates methods that can selectively modify reaction parameters for sensitivity analysis and uncertainty quantification. The library contains several functions that provide analytically computed Jacobian matrices necessary for the efficient time advancement and analysis of detailed kinetic models.

The software is released subject the terms of the GNU Lesser General Public License (http://www.gnu.org/copyleft/lesser.html) Please read the license information before downloading the software.

Module Index

2.1 Modules

Here is a list of all modules:

- Equation of state ................................................................. 9
- Thermodynamic properties .................................................. 14
- Initialization ........................................................................ 23
- Jacobians ............................................................................ 26
- Source terms ........................................................................ 32
- Max. no. of parameters .......................................................... 35
- No. of reactions ..................................................................... 36
- No. of species, variables, etc. ................................................. 37
3.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

- **element**
  - Element data ........................................... 39
- **elemtable**
  - Entry in the table of periodic elements .............. 39
- **reaction**
  - Reaction data .......................................... 40
- **species**
  - Species data ............................................ 41
Chapter 4

File Index

4.1 File List

Here is a list of all documented files with brief descriptions:

- **copyright.h**
  
  Copyright 2011 Sandia Corporation. Under the terms of Contract D-E-AC04-94AL85000 with Sandia Corporation, the U.S. Government retains certain rights in this software.

- **TC_chg.c**
  
  Functions for changing Arrhenius rate factors.

- **TC_defs.h**
  
  Definitions of variables names used by the library.

- **TC_init.c**
  
  Initialize chemical library.

- **TC_interface.h**
  
  Header file to be included in user’s code. Contains function definitions.

- **TC_kmodint.c**
  
  Collection of functions used to parse kinetic models from files.

- **TC_kmodint.h**
  
  Definitions of parameters and constants.

- **TC_mmlms.c**
  

- **TC_params.h**
  
  Reaction rate functions.

- **TC_spec.c**
  
  Species info.
TC_src.c  Source term and Jacobian functions ......................... 101
TC_thermo.c  Equation of state and thermodynamic functions ........ 103
TC_utils.c  Various utilities used by other functions ................. 106
Chapter 5

Module Documentation

5.1 Equation of state

Functions

- int TCDND_getRhoMixMs (double *scal, int Nvars, double *rhomix)
  Computes density based on temperature and species mass fractions using the equation of state. Input temperature is normalized, output density also normalized before exit.

- int TC_getRhoMixMs (double *scal, int Nvars, double *rhomix)
  Computes density based on temperature and species mass fractions using the equation of state.

- int TCDND_getRhoMixMl (double *scal, int Nvars, double *rhomix)
  Computes density based on temperature and species mole fractions using the equation of state. Input temperature is normalized, output density also normalized before exit.

- int TC_getRhoMixMl (double *scal, int Nvars, double *rhomix)
  Computes density based on temperature and species mole fractions using the equation of state.

- int TCDND_getTmixMs (double *scal, int Nvars, double *Tmix)
  Computes temperature based on density and species mass fractions using the equation of state. Input density is normalized, output temperature also normalized before exit.

- int TC_getTmixMs (double *scal, int Nvars, double *Tmix)
  Computes temperature based on density and species mass fractions using the equation of state.

- int TCDND_getTmixMl (double *scal, int Nvars, double *Tmix)
Computes temperature based on density and species mole fractions using the equation of state. Input density is normalized, output temperature also normalized before exit.

- int TC_getTmixMl (double * scal, int Nvars, double * Tmix)

Computes temperature based on density and species mole fractions using the equation of state.

5.1.1 Function Documentation

5.1.1.1 int TC_getRhoMixMl (double * scal, int Nvars, double * rhomix)

Computes density based on temperature and species mole fractions using the equation of state.

Parameters

<table>
<thead>
<tr>
<th>scal</th>
<th>array of Nspec +1 doubles (T,X1,X2,...,XNspec), temperature T [K], mole fractions X[]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nvars</td>
<td>no. of variables = Nspec +1</td>
</tr>
</tbody>
</table>

Returns

rhomix: pointer to mixture density [kg/m$^3$]

References TC_errorMSG(), TC_Nspec_, TC_Nvars_, and TC_sMass_.
Referenced by TCDND_getRhoMixMl().

5.1.1.2 int TC_getRhoMixMs (double * scal, int Nvars, double * rhomix)

Computes density based on temperature and species mass fractions using the equation of state.

Parameters

<table>
<thead>
<tr>
<th>scal</th>
<th>array of Nspec +1 doubles (T,Y1,Y2,...,YNspec), temperature T [K], mass fractions Y[]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nvars</td>
<td>no. of variables = Nspec +1</td>
</tr>
</tbody>
</table>

Returns

rhomix: pointer to mixture density [kg/m$^3$]

References TC_errorMSG(), TC_Nspec_, TC_Nvars_, and TC_sMass_.

Generated on Sun Nov 27 2011 21:48:52 for TChem by Doxygen
5.1 Equation of state

Referenced by TC_getJacRPTYNanl(), TC_getJacRPTYNnum(), TC_getJacTYN(), TC_getJacTYNanl(), TC_getJacTYNm1(), TC_getJacTYNm1anl(), TC_getMs2Cc(), TC_getSrc(), and TCDND_getRhoMixMs().

5.1.1.3 int TC_getTmixMl ( double * scal, int Nvars, double * Tmix )

Computes temperature based on density and species mole fractions using the equation of state.

Parameters

| scal | array of Nspec +1 doubles (rho,X_1 ,X_2 ,...,X_{Nspec } ), density rho [kg/m^3 ], mole fractions X [] |
| Nvars | no. of variables = Nspec +1 |

Returns

Tmix : pointer to temperature [K]

References TC_errorMSG(), TC_Nspec_, TC_Nvars_, and TC_sMass_.

Referenced by TCDND_getTmixMl().

5.1.1.4 int TC_getTmixMs ( double * scal, int Nvars, double * Tmix )

Computes temperature based on density and species mass fractions using the equation of state.

Parameters

| scal | array of Nspec +1 doubles (rho,Y_1 ,Y_2 ,...,Y_{Nspec } ), density rho [kg/m^3 ], mass fractions Y [] |
| Nvars | no. of variables = Nspec +1 |

Returns

Tmix : pointer to temperature [K]

References TC_errorMSG(), TC_Nspec_, TC_Nvars_, and TC_sMass_.

Referenced by TC_getSrcCons(), and TCDND_getTmixMs().
5.1.1.5 int TCDND_getRhoMixMl ( double * scal, int Nvars, double * rhomix )

Computes density based on temperature and species mole fractions using the equation of state. Input temperature is normalized, output density also normalized before exit.

Parameters

| scal | array of Nspec +1 doubles (T,X_1,X_2,...,X_{Nspec}), temperature T [K], mole fractions X [] |
| Nvars | no. of variables = Nspec +1 |

Returns

rhomix : pointer to mixture density [kg/m^3]

References TC_errorMSG(), TC_getRhoMixMl(), and TC_Nvars_.

5.1.1.6 int TCDND_getRhoMixMs ( double * scal, int Nvars, double * rhomix )

Computes density based on temperature and species mass fractions using the equation of state. Input temperature is normalized, output density also normalized before exit.

Parameters

| scal | array of Nspec +1 doubles (T,Y_1,Y_2,...,Y_{Nspec}), temperature T [K], mass fractions Y [] |
| Nvars | no. of variables = Nspec +1 |

Returns

rhomix : pointer to mixture density [kg/m^3]

References TC_errorMSG(), TC_getRhoMixMs(), and TC_Nvars_.

5.1.1.7 int TCDND_getTmixMl ( double * scal, int Nvars, double * Tmix )

Computes temperature based on density and species mole fractions using the equation of state. Input density is normalized, output temperature also normalized before exit.

Parameters

| scal | array of Nspec +1 doubles (rho,X_1,X_2,...,X_{Nspec}), density rho [kg/m^3], mole fractions X [] |
| Nvars | no. of variables = Nspec +1 |
5.1 Equation of state

Returns

Tmix : pointer to temperature [K]

References TC_errorMSG(), TC_getTmixMl(), and TC_Nvars_.

5.1.1.8 int TCDND_getTmixMs ( double * scal, int Nvars, double * Tmix )

Computes temperature based on density and species mass fractions using the equation of state. Input density is normalized, output temperature also normalized before exit.

Parameters

<table>
<thead>
<tr>
<th>scal</th>
<th>array of Nspec +1 doubles (rho, Y1, Y2, ..., YNspec ), density rho [kg/m³], mass fractions Y[]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nvars</td>
<td>no. of variables = Nspec +1</td>
</tr>
</tbody>
</table>

Returns

Tmix : pointer to temperature [K]

References TC_errorMSG(), TC_getTmixMs(), and TC_Nvars_.

Generated on Sun Nov 27 2011 21:48:52 for TChem by Doxygen
5.2 Thermodynamic properties

Functions

- int TCDND_getMs2CpMixMs (double *scal, int Nvars, double *cpmix)
  Computes mixture specific heat at constant pressure based on temperature and species mass fractions. Input temperature is normalized, output specific heat is also normalized before exit.

- int TC_getMs2CpMixMs (double *scal, int Nvars, double *cpmix)
  Computes mixture specific heat at constant pressure based on temperature and species mass fractions.

- int TCDND_getMs2CvMixMs (double *scal, int Nvars, double *cvmix)
  Computes mixture specific heat at constant volume based on temperature and species mass fractions. Input temperature is normalized, output specific heat is also normalized before exit.

- int TC_getMs2CvMixMs (double *scal, int Nvars, double *cvmix)
  Computes mixture specific heat at constant volume based on temperature and species mass fractions.

- int TCDND_getMl2CpMixMl (double *scal, int Nvars, double *cpmix)
  Computes mixture heat capacity at constant pressure based on temperature and species mole fractions. Input temperature is normalized, output specific heat is also normalized before exit.

- int TC_getMl2CpMixMl (double *scal, int Nvars, double *cpmix)
  Computes mixture specific heat at constant pressure based on temperature and species mole fractions.

- int TCDND_getCpSpecMs (double t, int Nspec, double *cpi)
  Computes species specific heat at constant pressure based on temperature. Input temperature is normalized, output specific heats are also normalized before exit.

- int TC_getCpSpecMs (double t, int Nspec, double *cpi)
  Computes species specific heat at constant pressure based on temperature.

- int TCDND_getCpSpecMl (double t, int Nspec, double *cpi)
  Computes species heat capacities at constant pressure based on temperature. Input temperature is normalized, output heat capacities are also normalized before exit.

- int TC_getCpSpecMl (double t, int Nspec, double *cpi)
  Computes species heat capacities at constant pressure based on temperature.

- int TCDND_getMs2HmixMs (double *scal, int Nvars, double *hmix)
  Computes mixture specific enthalpy based on temperature and species mass fractions. Input temperature is normalized, output enthalpy is normalized before exit.

- int TC_getMs2HmixMs (double *scal, int Nvars, double *hmix)
  Computes mixture specific enthalpy based on temperature and species mass fractions.

- int TCDND_getMl2HmixMl (double *scal, int Nvars, double *hmix)
  Computes mixture molar enthalpy based on temperature and species mole fractions. Input temperature is normalized, output enthalpy is normalized before exit.
5.2 Thermodynamic properties

- int TC_getMl2HmixMl (double *scal, int Nvars, double *hmix)
  Computes mixture molar enthalpy based on temperature and species mole fractions.
- int TCDND_getHspecMs (double t, int Nspec, double *hi)
  Computes species specific enthalpies based on temperature. Input temperature is normalized, output enthalpies are also normalized before exit.
- int TC_getHspecMs (double t, int Nspec, double *hi)
  Computes species specific enthalpies based on temperature.
- int TCDND_getHspecMl (double t, int Nspec, double *hi)
  Computes species molar enthalpies based on temperature. Input temperature is normalized, output enthalpies are also normalized before exit.
- int TC_getHspecMl (double t, int Nspec, double *hi)
  Computes species molar enthalpies based on temperature.

5.2.1 Function Documentation

5.2.1.1 int TC_getCpSpecMl ( double t, int Nspec, double *cpi )

Computes species heat capacities at constant pressure based on temperature.

Parameters

| t  | : temperature T [K] |
|------------------------|
| Nspec                  | : no. of species |

Returns

cpi : array with species heat capacities at constant pressure [J/(kmol.K)]

References TC_errorMSG(), and TC_Nspec_.
Referenced by TC_getMl2CpMixMl(), and TCDND_getCpSpecMl().

5.2.1.2 int TC_getCpSpecMs ( double t, int Nspec, double *cpi )

Computes species specific heat at constant pressure based on temperature.

Parameters

| t  | : temperature T [K] |
|------------------------|
| Nspec                  | : no. of species |

References TC_errorMSG(), and TC_Nspec_.
Referenced by TC_getMl2CpMixMl(), and TCDND_getCpSpecMl().
Returns

cpi : array with species specific heats at constant pressure [J/(kg.K)]

References TC_errorMSG(), and TC_Nspec_.
Referenced by TC_getJacRPTYNnum(), TC_getMs2CpMixMs(), and TCDND_getCpSpecMs().

5.2.1.3 int TC_getHspecMl ( double t, int Nspec, double * hi )

Computes species molar enthalpies based on temperature.

Parameters

<table>
<thead>
<tr>
<th>t</th>
<th>: temperature T [K]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nspec</td>
<td>: no. of species</td>
</tr>
</tbody>
</table>

Returns

hi : array with species molar enthalpies [J/kmol]

References TC_errorMSG(), and TC_Nspec_.
Referenced by TC_getMl2HmixMl(), and TCDND_getHspecMl().

5.2.1.4 int TC_getHspecMs ( double t, int Nspec, double * hi )

Computes species specific enthalpies based on temperature.

Parameters

<table>
<thead>
<tr>
<th>t</th>
<th>: temperature T [K]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nspec</td>
<td>: no. of species</td>
</tr>
</tbody>
</table>

Returns

hi : array with species specific enthalpies [J/kg]

References TC_errorMSG(), and TC_Nspec_.
Referenced by TC_getJacRPTYNanl(), TC_getJacRPTYNnum(), TC_getMs2HmixMs(), TC_getSrc(), TC_getSrcCons(), and TCDND_getHspecMs().
5.2 Thermodynamic properties

5.2.1.5 int TC_getMl2CpMixMl ( double * scal, int Nvars, double * cpmix )
Computes mixture specific heat at constant pressure based on temperature and species mole fractions.

Parameters

| scal | array of NSpec +1 doubles (T,X1,X2,...,XNSpec), temperature T [K], mole fractions X[] |
| Nvars | no. of variables = Nspec +1 |

Returns

cpmix : pointer to mixture specific heat at constant pressure [J/(kmol.K)]

References TC_errorMSG(), TC_getCpSpecMl(), TC_Nspec_, and TC_Nvars_.
Referenced by TCDND_getMl2CpMixMl().

5.2.1.6 int TC_getMl2HmixMl ( double * scal, int Nvars, double * hmix )
Computes mixture molar enthalpy based on temperature and species mole fractions.

Parameters

| scal | array of NSpec +1 doubles (T,X1,X2,...,XNSpec), temperature T [K], mole fractions X[] |
| Nvars | no. of variables = Nspec +1 |

Returns

hmix : pointer to mixture molar enthalpy [J/kmol]

References TC_errorMSG(), TC_getHspecMl(), TC_Nspec_, and TC_Nvars_.
Referenced by TCDND_getMl2HmixMl().

5.2.1.7 int TC_getMs2CpMixMs ( double * scal, int Nvars, double * cpmix )
Computes mixture specific heat at constant pressure based on temperature and species mass fractions.

Parameters

| scal | array of NSpec +1 doubles (T,Y1,Y2,...,YNSpec), temperature T [K], mass fractions Y[] |
| Nvars | no. of variables = Nspec +1 |

References TC_errorMSG(), TC_getCpSpecMs(), TC_Nspec_, and TC_Nvars_.
Referenced by TCDND_getMs2CpMixMs().
Returns

cpmix : pointer to mixture specific heat at constant pressure [J/(kg.K)]

References TC_errorMSG(), TC_getCpSpecMs(), TC_Nspec_, and TC_Nvars_.
Referenced by TC_getJacRPTYNanl(), TC_getJacRPTYNum(), TC_getMs2CvMixMs(), TC_getSrc(), TC_getSrcCons(), and TCDND_getMs2CpMixMs().

5.2.1.8 int TC_getMs2CvMixMs ( double *scal, int Nvars, double *cvmix )

Computes mixture specific heat at constant volume based on temperature and species mass fractions.

Parameters

scal : array of Nspec +1 doubles (T,Y_1,Y_2,...,Y_Nspec), temperature T [K], mass fractions Y []

Nvars : no. of variables = Nspec +1

Returns

cvmix : pointer to mixture specific heat at constant volume [J/(kg.K)]

References TC_errorMSG(), TC_getMs2CpMixMs(), TC_Nspec_, TC_Nvars_, and TC_sMass_.
Referenced by TCDND_getMs2CvMixMs().

5.2.1.9 int TC_getMs2HmixMs ( double *scal, int Nvars, double *hmix )

Computes mixture specific enthalpy based on temperature and species mass fractions.

Parameters

scal : array of Nspec +1 doubles (T,Y_1,Y_2,...,Y_Nspec), temperature T [K], mass fractions Y []

Nvars : no. of variables = Nspec +1

Returns

hmix : pointer to mixture specific enthalpy [J/kg]

References TC_errorMSG(), TC_getHspecMs(), TC_Nspec_, and TC_Nvars_.
Referenced by TCDND_getMs2HmixMs().
5.2 Thermodynamic properties

5.2.1.10 int TCDND_getCpSpecMl ( double t, int Nspec, double * cpi )

Computes species heat capacities at constant pressure based on temperature. Input temperature is normalized, output heat capacities are also normalized before exit.

Parameters

<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>t</td>
<td>: temperature T [K]</td>
<td></td>
</tr>
<tr>
<td>Nspec</td>
<td>: no. of species</td>
<td></td>
</tr>
</tbody>
</table>

Returns

cpi : array with species heat capacities at constant pressure [J/(kmol.K)]

References TC_errorMSG(), TC_getCpSpecMl(), and TC_Nspec_.

5.2.1.11 int TCDND_getCpSpecMs ( double t, int Nspec, double * cpi )

Computes species specific heat at constant pressure based on temperature. Input temperature is normalized, output specific heats are also normalized before exit.

Parameters

<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>t</td>
<td>: temperature T [K]</td>
<td></td>
</tr>
<tr>
<td>Nspec</td>
<td>: no. of species</td>
<td></td>
</tr>
</tbody>
</table>

Returns

cpi : array with species specific heats at constant pressure [J/(kg.K)]

References TC_errorMSG(), TC_getCpSpecMs(), and TC_Nspec_.

5.2.1.12 int TCDND_getHspecMl ( double t, int Nspec, double * hi )

Computes species molar enthalpies based on temperature. Input temperature is normalized, output enthalpies are also normalized before exit.

Parameters

<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>t</td>
<td>: temperature T [K]</td>
<td></td>
</tr>
<tr>
<td>Nspec</td>
<td>: no. of species</td>
<td></td>
</tr>
</tbody>
</table>
Returns

   hi : array with species molar enthalpies [J/kmol]

References TC_errorMSG(), TC_getHspecMs(), and TC_Nspec_.

5.2.1.13 int TCDND_getHspecMs ( double t, int Nspec, double * hi )

Computes species specific enthalpies based on temperature. Input temperature is nor-
malized, output enthalpies are also normalized before exit.

Parameters

<table>
<thead>
<tr>
<th>t</th>
<th align="left">: temperature T [K]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nspec</td>
<td align="left">: no. of species</td>
</tr>
</tbody>
</table>

Returns

   hi : array with species specific enthalpies [J/kg]

References TC_errorMSG(), TC_getHspecMs(), and TC_Nspec_.

5.2.1.14 int TCDND_getMl2CpMixMl ( double * scal, int Nvars, double * cpmix )

Computes mixture heat capacity at constant pressure based on temperature and
species mole fractions. Input temperature is normalized, output specific heat is also
normalized before exit.

Parameters

| scal | : array of Nspec +1 doubles (T,X1,X2,...,XNspec), temperature T [K],
mole fractions X[] |
|------|:------------------|
| Nvars| : no. of variables = Nspec +1 |

Returns

   cpmix : pointer to mixture heat capacity at constant pressure [J/(kmol.K)]

References TC_errorMSG(), TC_getMl2CpMixMl(), and TC_Nvars_.

5.2.1.15 int TCDND_getMl2HmixMl ( double * scal, int Nvars, double * hmix )

Computes mixture molar enthalpy based on temperature and species mole fractions.
Input temperature is normalized, output enthalpy is normalized before exit.
5.2 Thermodynamic properties

Parameters

- **scal**: array of \( N_{\text{spec}} + 1 \) doubles \((T, X_1, X_2, \ldots, X_{N_{\text{spec}}})\), temperature \( T \) [K], mole fractions \( X \)
- **Nvars**: no. of variables = \( N_{\text{spec}} + 1 \)

Returns

- \( h_{\text{mix}} \) : pointer to mixture molar enthalpy [J/kmol]

References TC_errorMSG(), TC_getMl2HmixMl(), and TC_Nvars_.

5.2.1.16 int TCDND_getMs2CpMixMs ( double * scal, int Nvars, double * cpmix )

Computes mixture specific heat at constant pressure based on temperature and species mass fractions. Input temperature is normalized, output specific heat is also normalized before exit.

Parameters

- **scal**: array of \( N_{\text{spec}} + 1 \) doubles \((T, Y_1, Y_2, \ldots, Y_{N_{\text{spec}}})\), temperature \( T \) [K], mass fractions \( Y \)
- **Nvars**: no. of variables = \( N_{\text{spec}} + 1 \)

Returns

- \( c_{\text{pmix}} \) : pointer to mixture specific heat at constant pressure [J/(kg.K)]

References TC_errorMSG(), TC_getMs2CpMixMs(), and TC_Nvars_.

5.2.1.17 int TCDND_getMs2CvMixMs ( double * scal, int Nvars, double * cvmix )

Computes mixture specific heat at constant volume based on temperature and species mass fractions. Input temperature is normalized, output specific heat is also normalized before exit.

Parameters

- **scal**: array of \( N_{\text{spec}} + 1 \) doubles \((T, Y_1, Y_2, \ldots, Y_{N_{\text{spec}}})\), temperature \( T \) [K], mass fractions \( Y \)
- **Nvars**: no. of variables = \( N_{\text{spec}} + 1 \)

References TC_errorMSG(), TC_getMs2CvMixMs(), and TC_Nvars_.
Returns
cpmix : pointer to mixture specific heat at constant volume [J/(kg.K)]

References TC_errorMSG(), TC_getMs2CvMixMs(), and TC_Nvars_.

5.2.1.18 int TCDND_getMs2HmixMs ( double * scal, int Nvars, double * hmix )

Computes mixture specific enthalpy based on temperature and species mass fractions. Input temperature is normalized, output enthalpy is normalized before exit.

Parameters

<table>
<thead>
<tr>
<th>scal</th>
<th>array of Nspec +1 doubles (T, Y_1, Y_2, ..., Y_Nspec), temperature T [K], mass fractions Y []</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nvars</td>
<td>no. of variables = Nspec +1</td>
</tr>
</tbody>
</table>

Returns

hmix : pointer to mixture specific enthalpy [J/kg]

References TC_errorMSG(), TC_getMs2HmixMs(), and TC_Nvars_.

5.3 Initialization

Functions

- int TC_initChem (char *mechfile, char *thermofile, int tab, double delT)
  Initialize library.
- void TC_setRefVal (double rhoref, double pref, double Tref, double Wref, double Daref, double omgref, double cpref, double href, double timref)
  Set reference values to the library.
- void TC_setNonDim ()
  Set library to function in non-dimensional mode.
- void TC_setDim ()
  Set library to function in dimensional mode (default)
- void TC_setThermoPres (double pressure)
  Send thermodynamic pressure to the library.
- int TC_makeSpace ()
  Allocate internal work arrays for the library. Should not be called by external functions.
- int TC_createTables (double delT)
  Create tables for temperature dependent terms. Should not be called by external functions.
- int TC_kmodint_ (char *mechfile, int *lmech, char *thermofile, int *lthrm)
  Kinetic model interpretor.

5.3.1 Function Documentation

5.3.1.1 int TC_createTables ( double delT )
Create tables for temperature dependent terms. Should not be called by external functions.

Parameters

| delT | temperature step size [K] |

References TC_Nreac_, and TC_Nspec_.
Referenced by TC_initChem().

5.3.1.2 int TC_initChem ( char *mechfile, char *thermofile, int tab, double delT )
Initialize library.
Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>mechfile</td>
<td>name of file containing kinetic model in chemkin format</td>
</tr>
<tr>
<td>thermofile</td>
<td>name of file containing coefficients for NASA polynomials</td>
</tr>
<tr>
<td>tab</td>
<td>flag to tabulate temperature dependent terms (tab=1 -&gt; create tables)</td>
</tr>
<tr>
<td>delT</td>
<td>temperature step size [K] for the tables; used only tab=1</td>
</tr>
</tbody>
</table>

</table>

5.3.1.5 void TC_setThermoPres ( double pressure )

Send thermodynamic pressure to the library.

Parameters

| $pressure$ | thermodynamic pressure $[N/m^2]$ |

Referenced by TC_initChem().
5.4 Jacobians

Functions

- int TCDND_getJacTYNm1anl (double *scal, int Nspec, double *jac)
  Computes analytical Jacobian (dimensional/non-dimensional) for the system \((T, Y_1, Y_2, \ldots, Y_{N-1})\) based on temperature \(T\) and species mass fractions \(Y\)'s.

- int TC_getJacTYNm1anl (double *scal, int Nspec, double *jac)
  Computes analytical Jacobian for the system \((T, Y_1, Y_2, \ldots, Y_{N-1})\) based on \(T\) and \(Y\)'s.

- int TCDND_getJacTYNanl (double *scal, int Nspec, double *jac)
  Computes analytical Jacobian (dimensional/non-dimensional) for the system \((T, Y_1, Y_2, \ldots, Y_N)\) based on temperature \(T\) and \(Y\)'s.

- int TC_getJacTYNanl (double *scal, int Nspec, double *jac)
  Computes analytical Jacobian for the system \((T, Y_1, Y_2, \ldots, Y_N)\) based on \(T\) and \(Y\)'s.

- int TCDND_getJacTYNm1 (double *scal, int Nspec, double *jac, unsigned int useJacAnl)
  Computes (analytical or numerical) Jacobian (dimensional/non-dimensional) for the system \((T, Y_1, Y_2, \ldots, Y_{N-1})\) based on temperature \(T\) and species mass fractions \(Y\)'s.

- int TC_getJacTYNm1 (double *scal, int Nspec, double *jac, unsigned int useJacAnl)
  Computes (analytical or numerical) Jacobian for the system \((T, Y_1, Y_2, \ldots, Y_{N-1})\) based on \(T\) and \(Y\)'s.

- int TCDND_getJacTYN (double *scal, int Nspec, double *jac, unsigned int useJacAnl)
  Computes (analytical or numerical) Jacobian (dimensional/non-dimensional) for the system \((T, Y_1, Y_2, \ldots, Y_N)\) based on \(T\) and \(Y\)'s.

- int TC_getJacTYN (double *scal, int Nspec, double *jac, unsigned int useJacAnl)
  Computes (analytical or numerical) Jacobian for the system \((T, Y_1, Y_2, \ldots, Y_N)\) based on \(T\) and \(Y\)'s.

- int TC_getJacRPTYN (double *scal, int Nspec, double *jac, unsigned int useJacAnl)
  Computes (analytical) Jacobian for the system \((\rho, P, T, Y_1, Y_2, \ldots, Y_N)\) based on \(T\) and \(Y\)'s.

- int TC_getJacRPTYNanl (double *scal, int Nspec, double *jac)
  Computes analytical Jacobian for the system \((\rho, P, T, Y_1, Y_2, \ldots, Y_N)\) based on \(T\) and \(Y\)'s.

- int TC_getJacRPTYNnum (double *scal, int Nspec, double *jac)
  Computes numerical Jacobian for the system \((\rho, P, T, Y_1, Y_2, \ldots, Y_N)\) based on \(T\) and \(Y\)'s.
5.4.1 Function Documentation

5.4.1.1 int TC.getJacRPTYN ( double * scal, int Nspec, double * jac, unsigned int useJacAnl )

Computes (analytical) Jacobian for the system \((\rho, P, T, Y_1, Y_2, \ldots, Y_N)\) based on \(T\) and \(Y\)’s.

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>scal</td>
<td>array of (N_{spec} + 1) doubles ((T, Y_1, Y_2, \ldots, Y_{N_{spec}})) temperature (T) [K], mass fractions (Y) []</td>
</tr>
<tr>
<td>Nspec</td>
<td>no. of species (N_{spec})</td>
</tr>
<tr>
<td>useJacAnl</td>
<td>flag for Jacobian type (1-analytical, other values-numerical)</td>
</tr>
</tbody>
</table>

Returns

- jac : Jacobian array

References TC_errorMSG(), TC_getJacRPTYNanl(), TC_getJacRPTYNnum(), and TC_Nspec_.

5.4.1.2 int TC.getJacRPTYNanl ( double * scal, int Nspec, double * jac )

Computes analytical Jacobian for the system \((\rho, P, T, Y_1, Y_2, \ldots, Y_N)\) based on \(T\) and \(Y\)’s.

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>scal</td>
<td>array of (N_{spec} + 1) doubles ((T, Y_1, Y_2, \ldots, Y_{N_{spec}})) temperature (T) [K], mass fractions (Y) []</td>
</tr>
<tr>
<td>Nspec</td>
<td>no. of species (N_{spec})</td>
</tr>
</tbody>
</table>

Returns

- jac : Jacobian array

References TC_errorMSG(), TC_getHspecMs(), TC_getMs2Cc(), TC_getMs2CpMixMs(), TC_getRhoMixMs(), TC_maxOrdPar_, TC_maxSpecReac_, TC_nOrdReac_, TC_Nreac_, TC_nRealNuReac_, TC_Nspec_, TC_Nvars_, TC_Njac_, and TC_s-Mass_.

Referenced by TC_getJacRPTYN(), TC_getJacTYN(), TC_getJacTYNanl(), TC_getJacTYNm1(), and TC_getJacTYNm1anl().
5.4.1.3  int TC_getJacRPTYNnum ( double * scal, int Nspec, double * jac )

Computes numerical Jacobian for the system \((\rho, P, T, Y_1, Y_2, \ldots, Y_N)\) based on T and Y's.

Parameters

<table>
<thead>
<tr>
<th>scal</th>
<th>array of (N_{\text{spec}} + 1) doubles ((T, Y_1, Y_2, \ldots, Y_{N_{\text{spec}}})) temperature T [K], mass fractions Y</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nspec</td>
<td>no. of species (N_{\text{spec}})</td>
</tr>
</tbody>
</table>

Returns

jac : Jacobian array

References TC_errorMSG(), TC_getCpSpecMs(), TC_getHspecMs(), TC_getMs2Cc(),
TC_getMs2CpMixMs(), TC_getRhoMixMs(), TC_getTXC2RRms(), TC_Nspec_, TC_Njac_,
and TC_sMass_.

Referenced by TC_getJacRPTYN(), TC_getJacTYN(), and TC_getJacTYNm1().

5.4.1.4  int TC_getJacTYN ( double * scal, int Nspec, double * jac, unsigned int useJacAnl )

Computes (analytical or numerical) Jacobian for the system \((T, Y_1, Y_2, \ldots, Y_N)\) based on T and Y's.

Parameters

<table>
<thead>
<tr>
<th>scal</th>
<th>array of (N_{\text{spec}} + 1) doubles ((T, Y_1, Y_2, \ldots, Y_{N_{\text{spec}}})) temperature T [K], mass fractions Y</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nspec</td>
<td>no. of species (N_{\text{spec}})</td>
</tr>
<tr>
<td>useJacAnl</td>
<td>flag for Jacobian type (1-analytical, other values-numerical)</td>

Returns

jac : Jacobian array

References TC_errorMSG(), TC_getJacRPTYNanl(), TC_getMs2Wmix(), TC_getRhoMixMs(), TC_Nspec_, TC_Nvars_, TC_Nvjac_, and TC_sMass_.

Referenced by TCDND_getJacTYNm1anl().

5.4.1.8 int TCDND_getJacTYN ( double ∗ scal, int Nspec, double ∗ jac, unsigned int useJacAnl )

Computes (analytical or numerical) Jacobian for the system \((T, Y_1, Y_2, \ldots, Y_{N_{spec}})\) based on \(T\) and \(Y\)'s.

Parameters

| scal | : array of \(N_{spec} + 1\) doubles \((T, Y_1, Y_2, \ldots, Y_{N_{spec}})\) temperature \(T\) [K], mass fractions \(Y\) |
| Nspec | : no. of species \(N_{spec}\) |
| useJacAnl | : flag for Jacobian type (1-analytical, other values-numerical) |

Returns

jac : Jacobian array

References TC_errorMSG(), TC_getJacTYN(), and TC_Nspec_.

5.4.1.9 int TCDND_getJacTYNanl ( double ∗ scal, int Nspec, double ∗ jac )

Computes analytical Jacobian (dimensional/non-dimensional) for the system \((T, Y_1, Y_2, \ldots, Y_{N_{spec}})\) based on \(T\) and \(Y\)'s.

Parameters

| scal | : array of \(N_{spec} + 1\) doubles \((T, Y_1, Y_2, \ldots, Y_{N_{spec}})\) temperature \(T\) [K], mass fractions \(Y\) |
| Nspec | : no. of species \(N_{spec}\) |

Returns

jac : Jacobian array

References TC_errorMSG(), TC_getJacTYNanl(), and TC_Nspec_.

Returns

jac : Jacobian array

References TC_errorMSG(), TC_getJacTYNm1(), and TC_Nspec_.

5.4.1.11 int TCDND_getJacTYNm1anl ( double * scal, int Nspec, double * jac )

Computes analytical Jacobian (dimensional/non-dimensional) for the system \((T, Y_1, Y_2, \ldots, Y_{N-1})\) based on temperature T and species mass fractions Y's.

Parameters

<table>
<thead>
<tr>
<th>scal</th>
<th>: array of (N_{spec} + 1) doubles ((T, Y_1, Y_2, \ldots, Y_{N_{spec}})) temperature T [K], mass fractions Y []</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nspec</td>
<td>: no. of species (N_{spec})</td>
</tr>
</tbody>
</table>

Returns

jac : Jacobian array

References TC_errorMSG(), TC_getJacTYNm1anl(), and TC_Nspec_.

5.5 Source terms

Functions

- int TCDND_getSrc (double *scal, int Nvars, double *omega)
  Returns dimensional/non-dimensional source term for
  \[
  \frac{\partial T}{\partial t} = \omega_0, \quad \frac{\partial Y_i}{\partial t} = \omega_i,
  \]
  based on temperature \( T \) and species mass fractions \( Y \)'s.

- int TC_getSrc (double *scal, int Nvars, double *omega)
  Returns source term for
  \[
  \frac{\partial T}{\partial t} = \omega_0, \quad \frac{\partial Y_i}{\partial t} = \omega_i,
  \]
  based on temperature \( T \) and species mass fractions \( Y \)'s.

- int TCDND_getSrcCons (double *scal, int Nvars, double *omega)
  Returns source term (dimensional/non-dimensional) for
  \[
  \frac{\partial \rho}{\partial t} = \omega_0, \quad \rho \frac{\partial Y_i}{\partial t} = \omega_i,
  \]
  based on \( \rho \) and \( Y \)'s.

- int TC_getSrcCons (double *scal, int Nvars, double *omega)
  Returns source term for
  \[
  \frac{\partial \rho}{\partial t} = \omega_0, \quad \rho \frac{\partial Y_i}{\partial t} = \omega_i,
  \]
  based on \( \rho \) and \( Y \)'s.

5.5.1 Function Documentation

5.5.1.1 int TC_getSrc ( double * scal, int Nvars, double * omega )

Returns source term for
\[
\frac{\partial T}{\partial t} = \omega_0, \quad \frac{\partial Y_i}{\partial t} = \omega_i,
\]
based on temperature \( T \) and species mass fractions \( Y \)'s.

Parameters

<table>
<thead>
<tr>
<th>scal</th>
<th>array of Nspec+1 doubles ((T, Y_1, Y_2, ..., Y_{N_{spec}})) temperature ( T ) [K], mass fractions ( Y ) []</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nvars</td>
<td>no. of variables ( N_{vars} = N_{spec} + 1 )</td>
</tr>
</tbody>
</table>
5.5 Source terms

Returns

\[ \omega : \text{array of } N_{\text{spec}} + 1 \text{ source terms for temperature and species mass fractions: } \omega[0] : [(K/s)], \omega[1...N_{\text{spec}}] : [(1/s)] \]

References TC_errorMSG(), TC_getHspecMs(), TC_getMs2CpMixMs(), TC_getRhMmixMs(), TC_getTY2RRMs(), TC_Nspec_, and TC_Nvars_.

Referenced by TCDND_getSrc().

5.5.1.2 int TC_getSrcCons ( double * scal, int Nvars, double * omega )

Returns source term for

\[ \frac{\partial \rho}{\partial t} = \omega_0, \rho \frac{\partial Y_i}{\partial t} = \omega_i, \]

based on \( \rho \) and \( Y_i \)'s.

Parameters

<table>
<thead>
<tr>
<th>scal</th>
<th>array of ( N_{\text{spec}} + 1 ) doubles ( (\rho, Y_1, Y_2, ..., Y_N) ) density ([kg/m^3]), mass fractions ( Y )</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nvars</td>
<td>no. of variables ( = N_{\text{spec}} + 1 )</td>
</tr>
</tbody>
</table>

Returns

\[ \omega : \text{array of } N_{\text{spec}} + 1 \text{ source terms for density and species mf conservative formulation: } \omega[0] : [kg/(m^3 \cdot s)], \omega[1...N_{\text{spec}}] : [kg/(m^3 \cdot s)] \]

References TC_errorMSG(), TC_getHspecMs(), TC_getMs2CpMixMs(), TC_getMs2Wmix(), TC_getTmixMs(), TC_getTY2RRml(), TC_Nspec_, TC_Nvars_, and TC_sMass_.

Referenced by TCDND_getSrcCons().

5.5.1.3 int TCDND_getSrc ( double * scal, int Nvars, double * omega )

Returns dimensional/non-dimensional source term for

\[ \frac{\partial T}{\partial t} = \omega_0, \frac{\partial Y_i}{\partial t} = \omega_i, \]

based on temperature \( T \) and species mass fractions \( Y_i \)'s.

Parameters

<table>
<thead>
<tr>
<th>scal</th>
<th>array of ( N_{\text{spec}} + 1 ) doubles ( (T, Y_1, Y_2, ..., Y_{N_{\text{spec}}}) ) temperature ( T ) [K], mass fractions ( Y )</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nvars</td>
<td>no. of variables ( N_{\text{vars}} = N_{\text{spec}} + 1 )</td>
</tr>
</tbody>
</table>
Returns

\[ \omega : \text{array of Nspec +1 source terms (possibly normalized) for temperature and species mass fractions equations: } \omega[0] : \text{[(K/s)]}, \omega[1...Nspec] : \text{[(1/s)]} \]

References TC_errorMSG(), TC_getSrc(), TC_Nspec_, and TC_Nvars_.

5.5.1.4 int TCDND_getSrcCons ( double * scal, int Nvars, double * omega )

Returns source term (dimensional/non-dimensional) for

\[
\frac{\partial \rho}{\partial t} = \omega_0, \rho \frac{\partial Y_i}{\partial t} = \omega_i,
\]

based on \( \rho \) and \( Y \)'s.

Parameters

<table>
<thead>
<tr>
<th>scal</th>
<th>array of Nspec+1 doubles (( \rho, Y_1, Y_2, ..., Y_N )) density [kg/m^3], mass fractions ( Y [] )</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nvars</td>
<td>no. of variables = Nspec +1</td>
</tr>
</tbody>
</table>

Returns

\[ \omega : \text{array of Nspec +1 source terms for density and species mf conservative formulation: } \omega[0] : \text{[kg/(m^3 \cdot s)]}, \omega[1...Nspec] : \text{[kg/(m^3 \cdot s)]} \]

References TC_errorMSG(), TC_getSrcCons(), TC_Nspec_, and TC_Nvars_.

5.6 Max. no. of parameters

Variables

- static int TC_maxSpecInReac_
  Maximum number of species in a reaction.
- static int TC_maxTblnReac_
  Max # of third-body efficiencies in a reaction.
- static int TC_nNASAinter_
  # of temperature regions for thermo fits
- static int TC_nCpCoef_
  # of polynomial coefficients for thermo fits
- static int TC_nArhPar_
  # of Arrhenius parameters
- static int TC_nLtPar_
  # of parameters for Landau-Teller reactions
- static int TC_nFallPar_
  # of parameters for pressure-dependent reactions
- static int TC_nJanPar_
  # of parameters for Jannev-Langer fits (JAN)
- static int TC_maxOrdPar_
  # of parameters for arbitrary order reactions
- static int TC_nFit1Par_
  # of parameters for FIT1 fits
5.7 No. of reactions

Variables

- static int TC_Nreac_
  # of reactions
- static int TC_nRevReac_
  # of reactions with REV given
- static int TC_nFallReac_
  # of pressure-dependent reactions
- static int TC_nThbReac_
  # of reactions using third-body efficiencies
- static int TC_nLtReac_
  # of Landau-Teller reactions
- static int TC_nRltReac_
  # of Landau-Teller reactions with RLT given
- static int TC_nHvReac_
  # of reactions with HV
- static int TC_nJanReac_
  # of reactions with JAN fits
- static int TC_nFit1Reac_
  # of reactions with FIT1 fits
- static int TC_nExciReac_
  # of reactions with EXCI
- static int TC_nMomeReac_
  # of reactions with MOME
- static int TC_nXsmiReac_
  # of reactions with XSMI
- static int TC_nTdepReac_
  # of reactions with TDEP
- static int TC_nRealNuReac_
  # of reactions with non-int stoichiometric coefficients
- static int TC_nOrdReac_
  # of reactions with arbitrary order
5.8 No. of species, variables, etc.

Variables

- static int TC_Nvars_
  
  # of variables = no. of species + 1

- static int TC_Njac_
  
  # of lines/cols in the Jacobian = no. of species + 3

- static int TC_Nelem_
  
  # of chemical elements

- static int TC_Nspec_
  
  # of species

- static int TC_nIonSpec_
  
  # of ion species

- static int TC_electrIndx_
  
  Index of the electron species.

- static int TC_nIonEspec_
  
  # of ion species excluding the electron species
Chapter 6

Class Documentation

6.1 element Struct Reference

Element data.
#include <TC_kmodint.h>

Public Attributes

- char name [LENGTHOFELEMNAME]
- int hasmass
- double mass

6.1.1 Detailed Description

Element data.
The documentation for this struct was generated from the following file:

- TC_kmodint.h

6.2 elemtable Struct Reference

Entry in the table of periodic elements.
#include <TC_kmodint.h>
Public Attributes

- char name [LENGTHOFELEMNAME]
- double mass

6.2.1 Detailed Description

Entry in the table of periodic elements.

The documentation for this struct was generated from the following file:

- TC_kmodint.h

6.3 reaction Struct Reference

Reaction data.

#include <TC_kmodint.h>

Public Attributes

- int isdup
- int isreal
- int isrev
- int isfall
- int specfall
- int isthrdb
- int nthrdb
- int iswl
- int isbal
- int iscomp
- int inreac
- int inprod
- int ismome
- int isxsmi
- int isfard
- int isrord
- int islowset
- int ishighset
- int istroeset
- int issriset
- int isrevset
6.3.1 Detailed Description

Reaction data.

The documentation for this struct was generated from the following file:

- TC_kmodint.h

6.4 species Struct Reference

Species data.

#include <TC_kmodint.h>
Public Attributes

- char name [LENGTHOFSPCNAME]
- int hasthermo
- int hasmass
- double mass
- int charge
- int phase
- int numofelem
- int elemindx [NUMBEROFELEMINSPEC]
- int elemcontent [NUMBEROFELEMINSPEC]
- double nasapoltemp [3]
- double nasapolcoefs [14]

6.4.1 Detailed Description

Species data.

The documentation for this struct was generated from the following file:

- TC_kmodint.h

7.2 TC_chg.c File Reference

Functions for changing Arrhenius rate factors.

Functions

- int TC_chgArhenFor (int ireac, int ipos, double newval)
  Change parameters for forward rate constants.
- int TC_chgArhenForRev (int ireac, int ipos)
  Reverse changes for forward rate constants’ parameters.
- int TC_chgArhenRev (int ireac, int ipos, double newval)
Change parameters for reverse rate constants.

- **int TC_chgArhenRevBack** (int ireac, int ipos)

Reverse changes for reverse rate constants' parameters.

### 7.2.1 Detailed Description

Functions for changing Arrhenius rate factors.

### 7.2.2 Function Documentation

#### 7.2.2.1 int TC_chgArhenFor ( int ireac, int ipos, double newval )

Change parameters for forward rate constants.

Parameters:

- **ireac**: reaction index
- **ipos**: index of parameter to be changed (0) pre-exponential factor (1) temperature exponent, (2) activation energy
- **newval**: new parameter value

References TC_Nreac_.

#### 7.2.2.2 int TC_chgArhenForBack ( int ireac, int ipos )

Reverse changes for forward rate constants' parameters.

Parameters:

- **ireac**: reaction index
- **ipos**: index of parameter to be changed (0) pre-exponential factor (1) temperature exponent, (2) activation energy

References TC_Nreac_.

#### 7.2.2.3 int TC_chgArhenRev ( int ireac, int ipos, double newval )

Change parameters for reverse rate constants.

Parameters:

- **ireac**: reaction index

References TC_Nreac_. 
7.3 TC_defs.h File Reference

### Definitions of variables names used by the library.

```c
#include "copyright.h" #include <stdio.h> #include "TC_params.h"
```

### Defines

- `#define TMAX 3500.0`
- `#define TMIN 290.0`
- `#define DTMID 10.0`

### Functions

1. `int TC_kmodint_ (char *mechfile, int *lmech, char *thermofile, int *lthrm)`  
   *Kinetic model interpretor.*
2. `int TC_makeSpace ()`  
   *Allocate internal work arrays for the library. Should not be called by external functions.*
3. `int TC_createTables (double delT)`  
   *Create tables for temperature dependent terms. Should not be called by external functions.*
• `void TC_errorMSG` (int msgID, char const *func, int var1, int var2)
  Outputs error messages for the library, then exits the execution.

• `void TC_errorINI` (FILE *errfile, char const *msg)
  Outputs error messages generated by `TC_initChem`.

• `static double fastIntPow` (double val, int exponent)

• `int TC_getRopsLocal` (double *scal)
  Returns molar reaction rates, \( \dot{\omega}_i \), based on \( T \) and molar concentrations \( X_C \)'s (semi-private function)

• `int TC_getgk` (double t1, double t_1, double tln)

• `int TC_getgkFcn` (double t1, double t_1, double tln)

• `int TC_getgkTab` (double t1)
  double `TC_getSumNuGk` (int i, double *gkLoc)
  double `TC_getSumRealNuGk` (int i, int ir, double *gkLoc)

• `int TC_get3rdBdyConc` (double *concX, double *concM)
  int `TC_getCrndDer` (int ireac, int *itbdy, int *ipfal, double t1, double t_1, double tln, double *concX, double *concM)

• `int TC_getHspecMsFcn` (double t, double *hi)

• `int TC_getHspecMsTab` (double t1, double *hi)

• `int TC_getCpSpecMsFcn` (double t, double *cpi)

• `int TC_getCpSpecMsTab` (double t1, double *cpi)

• `int TC_getCpSpecMs1Fcn` (double t, int i, double *cpi)

• `int TC_getCpSpecMs1Tab` (double t1, double *cpi)

• `int TC_getCrndDer` (int ireac, int *itbdy, int *ipfal, double t1, double t_1, double tln, double *concX, double *concM)

7.3.1 Detailed Description

Definitions of variables names used by the library.

7.3.2 Function Documentation

7.3.2.1 void TC_errorINI ( FILE∗ errfile, char const∗ msg )

Outputs error messages generated by TC_initChem.

Parameters

<table>
<thead>
<tr>
<th>errfile</th>
<th>file pointer for output</th>
</tr>
</thead>
<tbody>
<tr>
<td>msg</td>
<td>error message</td>
</tr>
</tbody>
</table>

Referenced by TC_initChem().

7.3.2.2 void TC_errorMSG ( int msgID, char const∗ func, int var1, int var2 )

Outputs error messages for the library, then exits the execution.

Parameters

<table>
<thead>
<tr>
<th>msgID</th>
<th>message ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>func</td>
<td>name of function calling this error function</td>
</tr>
<tr>
<td>var1</td>
<td>value #1 to be printed in the message</td>
</tr>
<tr>
<td>var2</td>
<td>value #2 to be printed in the message</td>
</tr>
</tbody>
</table>

Referenced by TC_getCpSpecMl(), TC_getCpSpecMs(), TC_getHspecMl(), TC_getHspecMs(), TC_getJacRPTYN(), TC_getJacRPTYNanl(), TC_getJacRPTYNnum(), TC_getJacTYN(), TC_getJacTYNanl(), TC_getJacTYNm1(), TC_getJacTYNm1anl(), TC_getMl2CpMixMl(), TC_getMl2HmixMl(), TC_getMs2CpMixMs(), TC_getMs2CvMixMs(), TC_getMs2HmixMs(), TC_getRfrb(), TC_getRhoMixMl(), TC_getRhoMixMs(), TC_getRops(), TC_getRsrc(), TC_getRsrcCons(), TC_getStoiCoef(), TC_getStoiCoefReac(), TC_getTmixMl(), TC_getTmixMs(), TC_getTXC2RRml(), TC_getTXC2RRms(), TC_getTY2RRml(), TC_getTY2RRms(), TCDND_getCpSpecMl(), TCDND_getCp-
7.3.2.3 int TC_getReacRates ( double *scal, int Nvars, double *omega )

Returns molar reaction rates, $\dot{\omega}_i$, based on T and molar concentrations $XC$'s (semi-private function)

**Parameters**

<table>
<thead>
<tr>
<th>scal</th>
<th>array of $N_{spec} + 1$ doubles ($(T, XC_1, XC_2, ..., XC_N)$): temperature T [K], molar concentrations $XC$ [kmol/m$^3$]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nvars</td>
<td>no. of variables $N_{vars} = N_{spec} + 1$</td>
</tr>
</tbody>
</table>

Returns

$\omega$ : array of $N_{spec}$ molar reaction rates $\dot{\omega}_i$ [kmol/(m$^3$ · s)]

References TC_maxSpecInReac_, TC_Nreac_, TC_nRealNuReac_, and TC_Nspec_.

7.4 TC_init.c File Reference

Initialize chemical library.

**Functions**

- int TC_initChem (char *mechfile, char *thermofile, int tab, double delT)
  
  *Initialize library.*

- void TC_setRefVal (double rhoref, double pref, double Tref, double Wref, double Daret, double omgref, double cpref, double href, double timref)
  
  *Set reference values to the library.*

- void TC_setNonDim ()
  
  *Set library to function in non-dimensional mode.*

- void TC_setDim ()
  
References TC_init.c File Reference
Set library to function in dimensional mode (default)

- void **TC_setThermoPres** (double pressure)
  
  Send thermodynamic pressure to the library.

- int **TC_makeSpace** ()
  
  Allocate internal work arrays for the library. Should not be called by external functions.

- int **TC_createTables** (double delT)
  
  Create tables for temperature dependent terms. Should not be called by external functions.

- void **TC_errorMSG** (int msgID, char const ∗func, int var1, int var2)
  
  Outputs error messages for the library, then exits the execution.

- void **TC_errorINI** (FILE ∗errfile, char const ∗msg)
  
  Outputs error messages generated by TC_initChem.

### 7.4.1 Detailed Description

Initialize chemical library.

### 7.4.2 Function Documentation

#### 7.4.2.1 void **TC_errorINI** ( FILE ∗errfile, char const ∗msg )

Outputs error messages generated by TC_initChem.

**Parameters**

- `errfile`: file pointer for output
- `msg`: error message

Referenced by TC_initChem().

#### 7.4.2.2 void **TC_errorMSG** ( int msgID, char const ∗func, int var1, int var2 )

Outputs error messages for the library, then exits the execution.

**Parameters**

- `msgID`: message ID
- `func`: name of function calling this error function
- `var1`: value #1 to be printed in the message
- `var2`: value #2 to be printed in the message
Referenced by TC_getCpSpecMl(), TC_getCpSpecMs(), TC_getHspecMl(), TC_getHspecMs(), TC_getJacRPTYN(), TC_getJacRPTYNanl(), TC_getJacRPTYNnum(), TC_getJacTYN(), TC_getJacTYNanl(), TC_getJacTYNm1(), TC_getJacTYNm1anl(), TC_getMl2CpMixMl(), TC_getMl2HmixMl(), TC_getMs2CpMixMs(), TC_getMs2CvMixMs(), TC_getMs2HmixMs(), TC_getRfrb(), TC_getRhoMixMl(), TC_getRhoMixMs(), TC_getRops(), TC_getSrc(), TC_getSrcCons(), TC_getStoiCoef(), TC_getStoiCoefReac(), TC_getTmixMl(), TC_getTmixMs(), TC_getTXC2RRml(), TC_getTXC2RRms(), TC_getTY2RRml(), TC_getTY2RRms(), TCDND_getCpSpecMl(), TCDND_getCpSpecMs(), TCDND_getHspecMl(), TCDND_getHspecMs(), TCDND_getJacTYN(), TCDND_getJacTYNanl(), TCDND_getJacTYNm1(), TCDND_getJacTYNm1anl(), TCDND_getMl2CpMixMl(), TCDND_getMl2HmixMl(), TCDND_getMs2CpMixMs(), TCDND_getMs2CvMixMs(), TCDND_getMs2HmixMs(), TCDND_getRhoMixMl(), TCDND_getRhoMixMs(), TCDND_getSrc(), TCDND_getSrcCons(), TCDND_getTmixMl(), TCDND_getTmixMs(), TCDND_getTXC2RRml(), TCDND_getTXC2RRms(), TCDND_getTY2RRml(), and TCDND_getTY2RRms.

7.5 TC_interface.h File Reference

Header file to be included in user’s code. Contains function definitions.

#include "copyright.h"

Defines

- #define TCSMALL 1.e-30

Functions

- int TC_chgArhenFor(int ireac, int ipos, double newval)
  Change parameters for forward rate constants.
- int TC_chgArhenRev(int ireac, int ipos, double newval)
  Change parameters for reverse rate constants.
- int TC_chgArhenForBack(int ireac, int ipos)
  Reverse changes for forward rate constants’ parameters.
- int TC_chgArhenRevBack(int ireac, int ipos)
  Reverse changes for reverse rate constants’ parameters.
- int TC_getArhenRev(int ireac, int ipos, double *val)
  Return current value of the Arrhenius parameters for reverse rate constants. Return -1 if no data available, otherwise return 0 and store value in val.
- int TC_getArhenFor(int ireac, int ipos, double *val)
Return current value of the Arrhenius parameters for forward rate constants. Return -1 if no data available, otherwise return 0 and store value in val.

- **void TC_reset()**
  Frees all memory and sets variables to 0 so that TC_initChem can be called again without a memory leak. Not designed for use with tables.

- **void TC_removeReaction(int *reacArr, int numRemoveReacs, int revOnly)**
  Removes a reaction from the mechanism. Not designed for use with tables.

- **void TC_restoreReactions()**
  Restores reaction mechanism to original state. Any changes from TC_chgArhenFor and TC_chgArhenRev are also reset.

- **int TC_initChem(char *mechfile, char *thermofile, int tab, double delT)**
  Initialize library.

- **void TC_setRefVal(double rhoref, double pref, double Tref, double Wref, double Daref, double omgref, double cpref, double href, double timref)**
  Set reference values to the library.

- **void TC_setNonDim()**
  Set library to function in non-dimensional mode.

- **void TC_setDim()**
  Set library to function in dimensional mode (default)

- **void TC_setThermoPres(double pressure)**
  Send thermodynamic pressure to the library.

- **int TC_getNspec()**
  Returns no. of species Nspec

- **int TC_getNelem()**
  Returns no. of elements Nelem

- **int TC_getNvars()**
  Returns no. of variables (Nspec +1)

- **double TC_getThermoPres()**

- **int TC_getSnames(int Nspec, char *snames)**
  Returns species names.

- **int TC_getSpos(const char *sname, const int slen)**
  Returns position a species in the list of species.

- **int TC_getSmass(int Nspec, double *Wi)**
  Returns species molar weights.

- **int TC_getSnameLen()**
  Returns length of species names.

- **int TC_getNreac()**
  Returns number of reactions Nreac.

- **int TC_getStoiCoef(int Nspec, int Nreac, double *stoicoef)**
Returns stoichiometric coefficients' matrix. The stoichiometric coefficient for species \( j \) in reaction \( i \) is stored at position \( i \cdot N_{\text{spec}} + j \). It assumes that stoicoef was dimensioned to at least \( N_{\text{reac}} \cdot N_{\text{spec}} \).

- int TC_getStoiCoefReac (int Nspec, int Nreac, int ireac, int idx, double *stoicoef)
  
  Returns stoichiometric coefficients' array for reaction \( \text{ireac} \) for either reactants (\( \text{idx}=0 \)) or products (\( \text{idx}=1 \)). The stoichiometric coefficient for species \( \text{ij} \) in reaction \( \text{ireac} \) is stored at position \( j \). It assumes that stoicoef was dimensioned to at least \( N_{\text{spec}} \).

- int TCDND_getTY2RRml (double *scal, int Nvars, double *omega)
  
  Returns non-dimensional molar reaction rates, \( \dot{\omega}_i \cdot \rho_{\text{ref}} \), based on \( T \) and \( Y \)'s.

- int TC_getTY2RRml (double *scal, int Nvars, double *omega)
  
  Returns molar reaction rates, \( \dot{\omega}_i \), based on \( T \) and \( Y \)'s.

- int TCDND_getTY2RRms (double *scal, int Nvars, double *omega)
  
  Returns non-dimensional mass reaction rates based on \( T \) and \( Y \)'s.

- int TC_getTY2RRms (double *scal, int Nvars, double *omega)
  
  Returns mass reaction rates based on \( T \) and \( Y \)'s.

- int TCDND_getTXC2RRml (double *scal, int Nvars, double *omega)
  
  Returns non-dimensional molar reaction rates based on temperature \( T \) and molar concentrations \( X_C \).

- int TC_getTXC2RRml (double *scal, int Nvars, double *omega)
  
  Returns molar reaction rates based on temperature \( T \) and molar concentrations \( X_C \).

- int TCDND_getTXC2RRms (double *scal, int Nvars, double *omega)
  
  Returns non-dimensional mass reaction rates based on \( T \) and molar concentrations.

- int TC_getTXC2RRms (double *scal, int Nvars, double *omega)
  
  Returns mass reaction rates based on \( T \) and molar concentrations.

- int TC_getRops (double *scal, int Nvars, double *datarop)
  
  Returns rate-of-progress variables based on temperature \( T \) and species mass fractions \( Y \)'s.

- int TC_getRfrb (double *scal, int Nvars, double *datarop)
  
  Returns forward and reverse rate-of-progress variables based on \( T \) and \( Y \)'s.

- int TCDND_getRhoMixMs (double *scal, int Nvars, double *rhomix)
  
  Computes density based on temperature and species mass fractions using the equation of state. Input temperature is normalized, output density also normalized before exit.

- int TC_getRhoMixMs (double *scal, int Nvars, double *rhomix)
  
  Computes density based on temperature and species mass fractions using the equation of state.

- int TCDND_getRhoMixMI (double *scal, int Nvars, double *rhomix)
  
  Computes density based on temperature and species mole fractions using the equation of state. Input temperature is normalized, output density also normalized before exit.

- int TC_getRhoMixMI (double *scal, int Nvars, double *rhomix)
Computes density based on temperature and species mole fractions using the equation of state.

- **int TCDND_getTmixMs** (double *scal, int Nvars, double *Tmix)
  - Computes temperature based on density and species mass fractions using the equation of state. Input density is normalized, output temperature also normalized before exit.

- **int TC_getTmixMs** (double *scal, int Nvars, double *Tmix)
  - Computes temperature based on density and species mass fractions using the equation of state.

- **int TCDND_getTmixMl** (double *scal, int Nvars, double *Tmix)
  - Computes temperature based on density and species mole fractions using the equation of state. Input density is normalized, output temperature also normalized before exit.

- **int TC_getTmixMl** (double *scal, int Nvars, double *Tmix)
  - Computes temperature based on density and species mole fractions using the equation of state.

- **int TCDND_getMs2CpMixMs** (double *scal, int Nvars, double *cpmix)
  - Computes mixture specific heat at constant pressure based on temperature and species mass fractions. Input temperature is normalized, output specific heat is also normalized before exit.

- **int TC_getMs2CpMixMs** (double *scal, int Nvars, double *cpmix)
  - Computes mixture specific heat at constant pressure based on temperature and species mass fractions.

- **int TCDND_getMs2CvMixMs** (double *scal, int Nvars, double *cvmix)
  - Computes mixture specific heat at constant volume based on temperature and species mass fractions. Input temperature is normalized, output specific heat is also normalized before exit.

- **int TC_getMs2CvMixMs** (double *scal, int Nvars, double *cvmix)
  - Computes mixture specific heat at constant volume based on temperature and species mass fractions.

- **int TCDND_getMl2CpMixMl** (double *scal, int Nvars, double *cpmix)
  - Computes mixture heat capacity at constant pressure based on temperature and species mole fractions. Input temperature is normalized, output specific heat is also normalized before exit.

- **int TC_getMl2CpMixMl** (double *scal, int Nvars, double *cpmix)
  - Computes mixture specific heat at constant pressure based on temperature and species mole fractions.

- **int TCDND_getCpSpecMs** (double t, int Nspec, double *cpi)
  - Computes species specific heat at constant pressure based on temperature. Input temperature is normalized, output specific heats are also normalized before exit.

- **int TC_getCpSpecMs** (double t, int Nspec, double *cpi)
  - Computes species specific heat at constant pressure based on temperature.

- **int TCDND_getCpSpecMl** (double t, int Nspec, double *cpi)
  - Computes species specific heat at constant pressure based on temperature.
Computes species heat capacities at constant pressure based on temperature. Input temperature is normalized, output heat capacities are also normalized before exit.

- int TC_getCpSpecMl (double t, int Nspec, double *cpi)
  Computes species heat capacities at constant pressure based on temperature.

- int TCDND_getMs2HmixMs (double *scal, int Nvars, double *hmix)
  Computes mixture specific enthalpy based on temperature and species mass fractions. Input temperature is normalized, output enthalpy is normalized before exit.

- int TC_getMs2HmixMs (double *scal, int Nvars, double *hmix)
  Computes mixture specific enthalpy based on temperature and species mass fractions.

- int TCDND_getMl2HmixMl (double *scal, int Nvars, double *hmix)
  Computes mixture molar enthalpy based on temperature and species mole fractions. Input temperature is normalized, output enthalpy is normalized before exit.

- int TC_getMl2HmixMl (double *scal, int Nvars, double *hmix)
  Computes mixture molar enthalpy based on temperature and species mole fractions.

- int TCDND_getHspecMs (double t, int Nspec, double *hi)
  Computes species specific enthalpies based on temperature. Input temperature is normalized, output enthalpies are also normalized before exit.

- int TC_getHspecMs (double t, int Nspec, double *hi)
  Computes species specific enthalpies based on temperature.

- int TCDND_getHspecMl (double t, int Nspec, double *hi)
  Computes species molar enthalpies based on temperature. Input temperature is normalized, output enthalpies are also normalized before exit.

- int TC_getHspecMl (double t, int Nspec, double *hi)
  Computes species molar enthalpies based on temperature.

- int TCDND_getMs2Cc (double *scal, int Nvars, double *concX)
  Computes molar concentrations based on temperature and species mass fractions. Input temperature is normalized, output concentrations are also normalized before exit.

\[
[X_k] = [X_k] \cdot \frac{W_{ref}}{\rho_{ref}} = Y_k \cdot \frac{\rho}{W_k} \cdot \frac{W_{ref}}{\rho_{ref}}
\]

- int TC_getMs2Cc (double *scal, int Nvars, double *concX)
  Computes molar concentrations based on temperature and species mass fractions.

\[
[X_k] = Y_k \cdot \frac{\rho}{W_k}
\]

- int TCDND_getMl2Ms (double *Xspec, int Nspec, double *Yspec)
  Transforms mole fractions to mass fractions (same as TC_getMl2Ms()).

\[
Y_k = X_k \cdot W_k / W_{mix}
\]

- int TC_getMl2Ms (double *Xspec, int Nspec, double *Yspec)
Transforms mole fractions to mass fractions.

\[ Y_k = X_k \cdot W_k / W_{mix} \]

- **int TCDND_getMs2Ml (double *Yspec, int Nspec, double *Xspec)**

  Transforms mass fractions to mole fractions (same as TC_getMs2Ml())

\[ X_k = Y_k \cdot W_{mix} / W_k \]

- **int TC_getMs2Ml (double *Yspec, int Nspec, double *Xspec)**

  Transforms mass fractions to mole fractions.

\[ X_k = Y_k \cdot W_{mix} / W_k \]

- **int TCDND_getMs2Wmix (double *Yspec, int Nspec, double *Wmix)**

  Computes mixture molecular weight based on species mass fractions. The molecular weight ([kg/kmol]=[g/mol]) is normalized before output.

\[
W_{mix} = \frac{W_{mix}}{W_{ref}} = \frac{1}{W_{ref}} \left( \sum_{k=1}^{N_{spec}} Y_k / W_k \right)^{-1}
\]

- **int TC_getMs2Wmix (double *Yspec, int Nspec, double *Wmix)**

  Computes mixture molecular weight based on species mass fractions.

\[
W_{mix} = \left( \sum_{k=1}^{N_{spec}} Y_k / W_k \right)^{-1}
\]

- **int TCDND_getMl2Wmix (double *Xspec, int Nspec, double *Wmix)**

  Computes mixture molecular weight based on species mole fractions. The molecular weight ([kg/kmol]=[g/mol]) is normalized before output.

\[
W_{mix} = \frac{W_{mix}}{W_{ref}} = \frac{1}{W_{ref}} \sum_{k=1}^{N_{spec}} X_k W_k
\]

- **int TC_getMl2Wmix (double *Xspec, int Nspec, double *Wmix)**

  Computes mixture molecular weight based on species mole fractions.

\[ W_{mix} = \sum_{k=1}^{N_{spec}} X_k W_k \]

- **int TCDND_getSrc (double *scal, int Nvars, double *omega)**
Returns dimensional/non-dimensional source term for
\[ \frac{\partial T}{\partial t} = \omega_0, \quad \frac{\partial Y_i}{\partial t} = \omega_i, \]
based on temperature T and species mass fractions Y's.

- **int TC_getSrc** (double *scal, int Nvars, double *omega)
  Returns source term for
  \[ \frac{\partial T}{\partial t} = \omega_0, \quad \frac{\partial Y_i}{\partial t} = \omega_i, \]
based on temperature T and species mass fractions Y's.

- **int TCDND_getSrcCons** (double *scal, int Nvars, double *omega)
  Returns source term (dimensional/non-dimensional) for
  \[ \frac{\partial \rho}{\partial t} = \omega_0, \quad \rho \frac{\partial Y_i}{\partial t} = \omega_i, \]
based on \( \rho \) and Y's.

- **int TC_getSrcCons** (double *scal, int Nvars, double *omega)
  Returns source term for
  \[ \frac{\partial \rho}{\partial t} = \omega_0, \quad \rho \frac{\partial Y_i}{\partial t} = \omega_i, \]
based on \( \rho \) and Y's.

- **int TCDND_getJacTYNm1anl** (double *scal, int Nspec, double *jac)
  Computes analytical Jacobian (dimensional/non-dimensional) for the system \((T,Y_1,Y_2,\ldots,Y_{N-1})\) based on temperature T and species mass fractions Y's.

- **int TC_getJacTYNm1anl** (double *scal, int Nspec, double *jac)
  Computes analytical Jacobian for the system \((T,Y_1,Y_2,\ldots,Y_{N-1})\) based on T and Y's.

- **int TCDND_getJacTYN1anl** (double *scal, int Nspec, double *jac)
  Computes analytical Jacobian (dimensional/non-dimensional) for the system \((T,Y_1,Y_2,\ldots,Y_{N})\) based on T and Y's.

- **int TC_getJacTYN1anl** (double *scal, int Nspec, double *jac, unsigned int useJacAnl)
  Computes (analytical or numerical) Jacobian (dimensional/non-dimensional) for the system \((T,Y_1,Y_2,\ldots,Y_{N})\) based on temperature T and species mass fractions Y's.

- **int TCDND_getJacTYN1** (double *scal, int Nspec, double *jac, unsigned int useJacAnl)
  Computes (analytical or numerical) Jacobian for the system \((T,Y_1,Y_2,\ldots,Y_{N})\) based on T and Y's.

- **int TCDND_getJacTYNanl** (double *scal, int Nspec, double *jac)
  Computes analytical Jacobian for the system \((T,Y_1,Y_2,\ldots,Y_{N})\) based on T and Y's.

- **int TC_getJacTYNanl** (double *scal, int Nspec, double *jac, unsigned int useJacAnl)
  Computes (analytical or numerical) Jacobian for the system \((T,Y_1,Y_2,\ldots,Y_{N})\) based on T and Y's.
Computes (analytical or numerical) Jacobian for the system \((T, Y_1, Y_2, \ldots, Y_N)\) based on \(T\) and \(Y\)'s.

- **int TC_getJacRPTYN** (double *scal, int Nspec, double *jac, unsigned int useJacAnl)
  Computes (analytical) Jacobian for the system \((p, P, T, Y_1, Y_2, \ldots, Y_N)\) based on \(T\) and \(Y\)'s.

- **int TC_getJacRPTYNanl** (double *scal, int Nspec, double *jac)
  Computes analytical Jacobian for the system \((p, P, T, Y_1, Y_2, \ldots, Y_N)\) based on \(T\) and \(Y\)'s.

- **int TC_getJacRPTYNnum** (double *scal, int Nspec, double *jac)
  Computes numerical Jacobian for the system \((p, P, T, Y_1, Y_2, \ldots, Y_N)\) based on \(T\) and \(Y\)'s.

### 7.5.1 Detailed Description

Header file to be included in user’s code. Contains function definitions.

### 7.5.2 Function Documentation

#### 7.5.2.1 int TC_chgArhenFor ( int ireac, int ipos, double newval )

Change parameters for forward rate constants.

**Parameters**

<table>
<thead>
<tr>
<th><strong>ireac</strong></th>
<th>reaction index</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>ipos</strong></td>
<td>index of parameter to be changed (0) pre-exponential factor (1) temperature exponent, (2) activation energy</td>
</tr>
<tr>
<td><strong>newval</strong></td>
<td>new parameter value</td>
</tr>
</tbody>
</table>

References TC_Nreac__.

#### 7.5.2.2 int TC_chgArhenForBack ( int ireac, int ipos )

Reverse changes for forward rate constants' parameters.

**Parameters**

<table>
<thead>
<tr>
<th><strong>ireac</strong></th>
<th>reaction index</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>ipos</strong></td>
<td>index of parameter to be changed (0) pre-exponential factor (1) temperature exponent, (2) activation energy</td>
</tr>
</tbody>
</table>

References TC_Nreac__.

Generated on Sun Nov 27 2011 21:48:52 for TChem by Doxygen
7.5 TC_interface.h File Reference

7.5.2.3  int TC_chgArhenRev ( int ireac, int ipos, double newval )

Change parameters for reverse rate constants.

Parameters

<table>
<thead>
<tr>
<th>ireac</th>
<th>: reaction index</th>
</tr>
</thead>
<tbody>
<tr>
<td>ipos</td>
<td>: index of parameter to be changed (0) pre-exponential factor (1) temperature exponent, (2) activation energy</td>
</tr>
<tr>
<td>newval</td>
<td>: new parameter value</td>
</tr>
</tbody>
</table>

References TC_nRevReac__.

7.5.2.4  int TC_chgArhenRevBack ( int ireac, int ipos )

Reverse changes for reverse rate constants' parameters.

Parameters

<table>
<thead>
<tr>
<th>ireac</th>
<th>: reaction index</th>
</tr>
</thead>
<tbody>
<tr>
<td>ipos</td>
<td>: index of parameter to be changed (0) pre-exponential factor (1) temperature exponent, (2) activation energy</td>
</tr>
</tbody>
</table>

References TC_nRevReac__.

7.5.2.5  int TC_getArhenFor ( int ireac, int ipos, double * val )

Return current value of the Arrhenius parameters for forward rate constants. Return -1 if no data available, otherwise return 0 and store value in val.

Parameters

<table>
<thead>
<tr>
<th>ireac</th>
<th>: reaction index</th>
</tr>
</thead>
<tbody>
<tr>
<td>ipos</td>
<td>: index of Arrhenius parameter (0) pre-exponential factor (1) temperature exponent, (2) activation energy</td>
</tr>
<tr>
<td>* val</td>
<td>: value of Arrhenius parameter</td>
</tr>
</tbody>
</table>

References TC_Nreac__.

7.5.2.6  int TC_getArhenRev ( int ireac, int ipos, double * val )

Return current value of the Arrhenius parameters for reverse rate constants. Return -1 if no data available, otherwise return 0 and store value in val.
Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>( ireac )</td>
<td>reaction index</td>
</tr>
<tr>
<td>( ipos )</td>
<td>index of Arrhenius parameter (0) pre-exponential factor (1) temperature exponent, (2) activation energy</td>
</tr>
<tr>
<td>( *val )</td>
<td>value of Arrhenius parameter</td>
</tr>
</tbody>
</table>

References TC_nRevReac_.

7.5.2.7 \( \text{int TC_getMl2Ms} \) ( double * \( X_{\text{spec}} \), int \( N_{\text{spec}} \), double * \( Y_{\text{spec}} \) )

Transforms mole fractions to mass fractions.

\[
Y_k = X_k \cdot W_k / W_{\text{mix}}
\]

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>( X_{\text{spec}} )</td>
<td>array of ( N_{\text{spec}} ) mole fractions</td>
</tr>
<tr>
<td>( N_{\text{spec}} )</td>
<td>no. of species</td>
</tr>
</tbody>
</table>

Returns

\( Y_{\text{spec}} \) : array of \( N_{\text{spec}} \) mass fractions

References TC_getMl2Wmix(), TC_Nspec_, and TC_sMass_.

Referenced by TCDND_getMl2Ms().

7.5.2.8 \( \text{int TC_getMl2Wmix} \) ( double * \( X_{\text{spec}} \), int \( N_{\text{spec}} \), double * \( W_{\text{mix}} \) )

Computes mixture molecular weight based on species mole fractions.

\[
W_{\text{mix}} = \sum_{k=1}^{N_{\text{spec}}} X_k W_k
\]

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>( X_{\text{spec}} )</td>
<td>array of ( N_{\text{spec}} ) mole fractions</td>
</tr>
<tr>
<td>( N_{\text{spec}} )</td>
<td>no. of species</td>
</tr>
</tbody>
</table>
Returns

Wmix : pointer to mixture molecular weight [kg/kmol]=[g/mol]

References TC_Nspec_, and TC_sMass_.
Referenced by TC_getMi2Ms().

7.5.2.9 int TC_getMs2Cc ( double * scal, int Nvars, double * concX )

Computes molar concentrations based on temperature and species mass fractions.

\[
[X_k] = Y_k \cdot \rho / W_k
\]

Parameters

| scal | array of Nspec +1 doubles (T,Y_1,Y_2,...,Y_Nspec), temperature T [K], mass fractions Y [] |
| Nvars | no. of variables = Nspec +1 |

Returns

concX : array of doubles containing species molar concentrations [kmol/m^3 ]

References TC_getRhoMixMs(), TC_Nspec_, TC_Nvars_, and TC_sMass_.
Referenced by TC_getJacRPTYNanl(), TC_getJacRPTYNnum(), TC_getRfrbi(), TC_getRops(), TC_getTY2RRml(), TC_getTY2RRms(), and TCDND_getMs2Cc().

7.5.2.10 int TC_getMs2Ml ( double * Yspec, int Nspec, double * Xspec )

Transforms mass fractions to mole fractions.

\[
X_k = Y_k \cdot W_{mix} / W_k
\]

Parameters

| Yspec | array of Nspec mass fractions |
| Nspec | no. of species |
Returns

$X_{\text{spec}}$ : array of $N_{\text{spec}}$ mole fractions

References TC_getMs2Wmix(), TC_Nspec_, and TC_sMass_.
References by TCDND_getMs2Wmix().

7.5.2.11 int TC_getMs2Wmix ( double * $Y_{\text{spec}}$, int $N_{\text{spec}}$, double * $W_{\text{mix}}$ )

Computes mixture molecular weight based on species mass fractions.

$$W_{\text{mix}} = \left( \sum_{k=1}^{N_{\text{spec}}} \frac{Y_k}{W_k} \right)^{-1}$$

Parameters

<table>
<thead>
<tr>
<th>$Y_{\text{spec}}$</th>
<th>: array of $N_{\text{spec}}$ mass fractions</th>
</tr>
</thead>
<tbody>
<tr>
<td>$N_{\text{spec}}$</td>
<td>: no. of species</td>
</tr>
</tbody>
</table>

Returns

$W_{\text{mix}}$ : pointer to mixture molecular weight [kg/kmol]=[g/mol]

References TC_Nspec_, and TC_sMass_.
Documents by TC_getJacTYN(), TC_getJacTYNaNl(), TC_getJacTYNm1(), TC_getJacTYNm1anl(), TC_getMs2Ml(), TC_getSrcCons(), TCDND_getMl2Wmix(), and TCDND_getMs2Wmix().

7.5.2.12 int TC_getRfrb ( double * $scal$, int $N_{\text{vars}}$, double * $datarop$ )

Returns forward and reverse rate-of-progress variables based on $T$ and $Y$'s.

Parameters

| $scal$ | : array of $N_{\text{spec}}+1$ doubles ($T$, $Y_1$, $Y_2$, ..., $Y_N$) temperature $T$ [K], mass fractions $Y$ [] |
| $N_{\text{vars}}$ | : no. of variables = $N_{\text{spec}}+1$ |

Returns

$datarop$ : array of $N_{\text{reac}}$ forward rate-of-progress variables and $N_{\text{reac}}$ reverse rate-of-progress variables [kmol/(m$^3$.s)]
7.5 TC_interface.h File Reference

References TC_errorMSG(), TC_getMs2Cc(), TC_Nreac_, TC_Nspec_, and TC_Nvars_.

7.5.2.13 int TC_getRops ( double * scal, int Nvars, double * datarop )

Returns rate-of-progress variables based on temperature T and species mass fractions Y's.

Parameters

| scal | array of Nreac +1 doubles (T,Y_1,Y_2,...,Y_N) temperature T [K], mass fractions Y [] |
| Nvars | no. of variables = Nspec +1 |

Returns

datarop : array of Nreac rate-of-progress variables [kmol/(m3.s)]

References TC_errorMSG(), TC_getMs2Cc(), TC_Nreac_, TC_Nspec_, and TC_Nvars_.

7.5.2.14 int TC_getSmass ( int Nspec, double * Wi )

Returns species molar weights.

Parameters

| Nspec | no. of species |

Returns

Wi : array of species molar weights [kg/kmol]=[g/mol]

References TC_Nspec_, and TC_sMass_.

7.5.2.15 int TC_getSnames ( int Nspec, char * snames )

Returns species names.

Parameters

| Nspec | no. of species |
Returns

snames: array of characters containing species names, each name is LENGTHOFSPECNAME characters

References LENGTHOFSPECNAME, TC_Nspec_, and TC_sNames_.

7.5.2.16 int TC_getSpos ( const char * sname, const int slen )

Returns position a species in the list of species.

Parameters

| sname | : string containing the name of the species |
| slen  | : length of species "sname" name |

Returns

position of species sname in the list of species, 0...(N spec -1)

References LENGTHOFSPECNAME, TC_Nspec_, and TC_sNames_.

7.5.2.17 int TC_getStoiCoef ( int Nspec, int Nreac, double * stoicoef )

Returns stoichiometric coefficients' matrix. The stoichiometric coefficient for species "j" in reaction "i" is stored at position \( i \cdot N_{spec} + j \). It assumes that stoicoef was dimensioned to at least \( N_{reac} \cdot N_{spec} \).

Parameters

| Nspec  | : no. of species |
| Nreac  | : no. of reactions |

Returns

stoicoef : array of stoichiometric coefficients

References TC_errorMSG(), TC_maxSpecInReac_, TC_Nreac_, TC_nRealNuReac_, and TC_Nspec_.

7.5.2.18 int TC_getStoiCoefReac ( int Nspec, int Nreac, int ireac, int idx, double * stoicoef )

Returns stoichiometric coefficients' array for reaction 'ireac' for either reactants (idx=0) or products (idx=1) The stoichiometric coefficient for species "j" in reaction "ireac" is
stored at position \( j \). It assumes that stoicoef was dimensioned to at least \( N_{\text{spec}} \).

**Parameters**

| \( N_{\text{spec}} \) | no. of species |
| \( N_{\text{reac}} \) | no. of reactions |
| \( ireac \) | reaction index |
| \( idx \) | 0-reactants, 1-products |

**Returns**

\( \text{stoicoef} \) : array of stoichiometric coefficients

References TC_errorMSG(), TC_maxSpecInReac_, TC_Nreac_, TC_nRealNuReac_, and TC_Nspec_.

7.5.2.19 \ int TC_getTXC2RRml ( double * \( \text{scal} \), int \( N_{\text{vars}} \), double * \( \omega \) )

Returns molar reaction rates based on temperature \( T \) and molar concentrations \( XC \).

**Parameters**

| \( \text{scal} \) | array of \( N_{\text{spec}} +1 \) doubles (\( T \), \( XC_1 \), \( XC_2 \), ..., \( XC_N \)) temperature \( T \) [K], molar concentrations \( XC \) [kmol/m3] |
| \( N_{\text{vars}} \) | no. of variables = \( N_{\text{spec}} +1 \) |

**Returns**

\( \omega \) : array of \( N_{\text{spec}} \) (molar) reaction rates [kmol/(m3.s)]

References TC_errorMSG(), TC_getReacRates(), TC_Nspec_, and TC_Nvars_.

Referenced by TCDND_getTXC2RRml().

7.5.2.20 \ int TC_getTXC2RRms ( double * \( \text{scal} \), int \( N_{\text{vars}} \), double * \( \omega \) )

Returns mass reaction rates based on \( T \) and molar concentrations.

**Parameters**

| \( \text{scal} \) | array of \( N_{\text{spec}} +1 \) doubles (\( T \), \( XC_1 \), \( XC_2 \), ..., \( XC_N \)) temperature \( T \) [K], molar concentrations \( XC \) [kmol/m3] |
| \( N_{\text{vars}} \) | no. of variables = \( N_{\text{spec}} +1 \) |

Generated on Sun Nov 27 2011 21:48:52 for TChem by Doxygen
Returns

omega : array of Nspec (mass) reaction rates [kg/(m3.s)]

References TC_errorMSG(), TC_getReacRates(), TC_Nspec_, TC_Nvars_, and TC_sMass_.

Referenced by TC_getJacRPTYNnum(), and TCDND_getTXC2RRms().

7.5.2.21 int TC_getTY2RRml ( double * scal, int Nvars, double * omega )

Returns molar reaction rates, \( \dot{\omega}_i \), based on T and Y’s.

Parameters

<table>
<thead>
<tr>
<th>scal</th>
<th>array of Nspec + 1 doubles (T, Y_1, Y_2, ..., Y_N): temperature T [K], mass fractions Y []</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nvars</td>
<td>no. of variables N vars = N spec + 1</td>
</tr>
</tbody>
</table>

Returns

omega : array of Nspec molar reaction rates \( \dot{\omega}_i \) [kmol/(m^3·s)]

References TC_errorMSG(), TC_getMs2Cc(), TC_getReacRates(), TC_Nspec_, and TC_Nvars_.

Referenced by TC_getSrcCons(), and TCDND_getTY2RRml().

7.5.2.22 int TC_getTY2RRms ( double * scal, int Nvars, double * omega )

Returns mass reaction rates based on T and Y’s.

Parameters

<table>
<thead>
<tr>
<th>scal</th>
<th>array of Nspec +1 doubles (T,Y_1,Y_2,...,Y_N) temperature T [K], mass fractions Y []</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nvars</td>
<td>no. of variables = Nspec + 1</td>
</tr>
</tbody>
</table>

Returns

omega : array of Nspec mass reaction rates [kg/(m3.s)]

References TC_errorMSG(), TC_getMs2Cc(), TC_getReacRates(), TC_Nspec_, TC_Nvars_, and TC_sMass_.

Referenced by TC_getSrc(), and TCDND_getTY2RRms().
7.5.2.23  void TC_removeReaction ( int * reacArr, int numRemoveReacs, int revOnly )

Removes a reaction from the mechanism. Not designed for use with tables.

Parameters

<table>
<thead>
<tr>
<th>reacArr</th>
<th>: 0-based reaction indices in ascending order.</th>
</tr>
</thead>
<tbody>
<tr>
<td>numRemoveReacs</td>
<td>: length of rearArr array.</td>
</tr>
<tr>
<td>revOnly</td>
<td>: set to 1 to remove reverse only, 0 to remove forward and reverse.</td>
</tr>
</tbody>
</table>

References TC_maxOrdPar_, TC_maxSpecInReac_, TC_maxTbInReac_, TC_nFallPar_, TC_nFallReac_, TC_nOrdReac_, TC_nrealNuReac_, TC_nRevReac_, TC_Nspec_, TC_nThbReac_, and TC_removeReaction().

Referenced by TC_removeReaction().

7.5.2.24  int TCDND_getMl2Ms ( double * Xspec, int Nspec, double * Yspec )

Transforms mole fractions to mass fractions (same as TC_getMl2Ms()).

\[ Y_k = X_k \cdot \frac{W_k}{W_{\text{mix}}} \]

Parameters

| Xspec | : array of Nspec mole fractions |
| Nspec | : no. of species |

Returns

Yspec : array of Nspec mass fractions

References TC_getMl2Ms(), and TC_Nspec_.

7.5.2.25  int TCDND_getMl2Wmix ( double * Xspec, int Nspec, double * Wmix )

Computes mixture molecular weight based on species mole fractions. The molecular weight ([kg/kmol]=[g/mol]) is normalized before output.

\[ \bar{W}_{\text{mix}} = \frac{W_{\text{mix}}}{W_{\text{ref}}} = \frac{1}{W_{\text{ref}}} \sum_{k=1}^{N_{\text{spec}}} X_k W_k \]

Generated on Sun Nov 27 2011 21:48:52 for TChem by Doxygen
Parameters

- \( X_{\text{spec}} \): array of \( N_{\text{spec}} \) mole fractions
- \( N_{\text{spec}} \): no. of species

Returns

- \( W_{\text{mix}} \): pointer to normalized mixture molecular weight

References TC_getMs2Wmix(), and TC_Nspec_.

7.5.2.26 int TCDND_getMs2Cc ( double * scal, int \( N_{\text{vars}} \), double * concX )

Computes molar concentrations based on temperature and species mass fractions. Input temperature is normalized, output concentrations are also normalized before exit.

\[
\begin{align*}
[X_k] &= [X_k] \cdot \frac{W_{\text{ref}} \rho_{\text{ref}}}{\rho_k W_k} = Y_k \cdot \frac{\rho}{W_{\text{ref}}} \rho_{\text{ref}} \\
\end{align*}
\]

Parameters

- \( scal \): array of \( N_{\text{spec}} + 1 \) doubles (\( T, Y_1, Y_2, \ldots, Y_{N_{\text{spec}}} \)), temperature \( T [K] \), mass fractions \( Y[] \)
- \( N_{\text{vars}} \): no. of variables = \( N_{\text{spec}} + 1 \)

Returns

- \( concX \): array of doubles containing species molar concentrations [kmol/m^3]

References TC_getMs2Cc(), TC_Nspec_, and TC_Nvars_.

7.5.2.27 int TCDND_getMs2Ml ( double * Yspec, int \( N_{\text{spec}} \), double * Xspec )

Transforms mass fractions to mole fractions (same as TC_getMs2Ml())

\[
X_k = Y_k \cdot \frac{W_{\text{mix}}}{W_k}
\]

Parameters

- \( Y_{\text{spec}} \): array of \( N_{\text{spec}} \) mass fractions
- \( N_{\text{spec}} \): no. of species
7.5 TC_interface.h File Reference

Returns

Xspec : array of Nspec mole fractions

References TC_getMs2Ml(), and TC_Nspec__.

7.5.2.28  int TCDND_getMs2Wmix ( double * Yspec, int Nspec, double * Wmix )

Computes mixture molecular weight based on species mass fractions. The molecular weight ([kg/kmol]=[g/mol]) is normalized before output.

\[
\bar{W}_{\text{mix}} = \frac{W_{\text{mix}}}{W_{\text{ref}}} = \frac{1}{W_{\text{ref}}} \left( \frac{N_{\text{spec}}}{\sum_{k=1}^{N_{\text{spec}}} Y_k/W_k} \right)^{-1}
\]

Parameters

<table>
<thead>
<tr>
<th>Yspec</th>
<th>: array of NSpec mass fractions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nspec</td>
<td>: no. of species</td>
</tr>
</tbody>
</table>

Returns

Wmix : pointer to normalized mixture molecular weight

References TC_getMs2Wmix(), and TC_Nspec__.

7.5.2.29  int TCDND_getTXC2RRml ( double * scal, int Nvars, double * omega )

Returns non-dimensional molar reaction rates based on temperature T and molar concentrations XC.

Parameters

<table>
<thead>
<tr>
<th>scal</th>
<th>: array of Nspec +1 doubles (T,XC_1,XC_2,...,XC_N) temperature T [K], molar concentrations XC [kmol/m3] (but non-dimensional)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nvars</td>
<td>: no. of variables = Nspec +1</td>
</tr>
</tbody>
</table>

Returns

omega : array of Nspec (molar) reaction rates [kmol/(m3.s)] (but non-dimensional)

References TC_errorMSG(), TC_getTXC2RRml(), TC_Nspec__, and TC_Nvars__.
7.5.2.30 int TCDND_getTXC2RRms ( double * scal, int Nvars, double * omega )

Returns non-dimensional mass reaction rates based on T and molar concentrations.

Parameters

- **scal**: array of Nspec +1 doubles (T, XC_{1}, XC_{2}, ..., XC_{N}) temperature T [K], molar concentrations XC [kmol/m3] (but non-dimensional)
- **Nvars**: no. of variables = Nspec +1

Returns

- **omega**: array of Nspec (mass) reaction rates [kg/(m3.s)] (but non-dimensional)

References TC_errorMSG(), TC_getTXC2RRms(), TC_Nspec_, and TC_Nvars_.

7.5.2.31 int TCDND_getTY2RRml ( double * scal, int Nvars, double * omega )

Returns non-dimensional molar reaction rates, \( \dot{\omega}_i \cdot t_{ref} \cdot \frac{W_{ref}}{P_{ref}} \), based on T and Y's.

Parameters

- **scal**: array of Nspec +1 doubles (T, Y_{1}, Y_{2}, ..., Y_{N}) temperature T [K], mass fractions Y []
- **Nvars**: no. of variables = Nspec +1

Returns

- **omega**: array of Nspec molar reaction rates [kmol/(m3.s)] (but non-dimensional)

References TC_errorMSG(), TC_getTY2RRml(), TC_Nspec_, and TC_Nvars_.

7.5.2.32 int TCDND_getTY2RRms ( double * scal, int Nvars, double * omega )

Returns non-dimensional mass reaction rates based on T and Y's.

Parameters

- **scal**: array of Nspec +1 doubles (T, Y_{1}, Y_{2}, ..., Y_{N}) temperature T [K], mass fractions Y []
- **Nvars**: no. of variables = Nspec +1
Returns

omega : array of \( N_{\text{spec}} \) mass reaction rates \([\text{kg}/(\text{m}^3\cdot\text{s})]\) (but non-dimensional)

References TC_errorMSG(), TC_getTY2RRms(), TC_Nspec_, and TC_Nvars_.

7.6 TC_kmodint.c File Reference

Collection of functions used to parse kinetic models from files.

```
#include <stdio.h> #include <stdlib.h> #include <math.h> #include <string.h> #include <ctype.h> #include "TC_params.h" #include "TC_kmodint.h"
```

Functions

- int TC_kmodint_ (char *mechfile, int *lmech, char *thermofile, int *lthrm)
  
  Kinetic model interpreter.

- void setperiodictable (elemtable *periodictable, int *Natoms, int iflag)
  
  Read periodic table.

- void checkeleminlist (char *elemname, element *listelem, int *Nelem, int *ipos)
  
  Returns index of an element in the list of elements:

- int getelements (char *linein, char *singleword, element **listelemaddr, int *Nelem, int *iread, int *ierror)
  
  Interprets a character string containing element names and possible their mass.

- void resetelemdata (element *currentelem)
  
  Reset data for an element.

- int setelementmass (element *listelem, int *Nelem, element *periodictable, int *Natoms, int *ierror)
  
  Set the mass for all entries in the list of elements based on the values found in the periodic table.

- int getspecies (char *linein, char *singleword, species **listspecaddr, int *Nspsc, int *Nspsmax, int *iread, int *ierror)
  
  Interprets a character string containing species names.

- void resetspecdata (species *currentspec)
  
  Reset data for a species.

- int setspecmass (element *listelem, int *Nelem, species *listspec, int *Nspsc, int *ierror)
  
  Set the mass for all entries in the list of elements based on the values found in the periodic table.

- void checkspecinlist (char *specname, species *listspec, int *Nspsc, int *ipos)
Returns position of a species in the list of species. The index goes from 0 to (Nspec-1); if the species is not found the value of Nspec is returned.

- **int checkthermo (species *listspec, int *Nspec)**
  Returns 1 if all species have thermodynamic properties set, 0 otherwise.

- **int getthermo (char *linein, char *singleword, FILE *mechin, FILE *thermoin, element *listelem, int *Nelem, species *listspec, int *Nspec, double *Tglobal, int *ithermo, int *iread, int *ierror)**
  Reads thermodynamic properties (NASA polynomials) from the mechanism input file or from a separate file.

- **void resetreacdata (reaction *currentreac, char *aunits, char *eunits)**
  Resets the current entry in the list of reactions.

- **void checkunits (char *linein, char *singleword, char *aunits, char *eunits)**
  Sets units for the pre-exponential factor and for the activation energy.

- **int getreacline (char *linein, char *singleword, species *listspec, int *Nspec, reaction *listreac, int *Nreac, int *ierror)**
  Interprets a character string containing reaction description (equation + forward - Arrhenius parameters)

- **int getreacauxl (char *linein, char *singleword, species *listspec, int *Nspec, reaction *listreac, int *Nreac, int *ierror)**
  Interprets a character string containing reaction description (auxiliary information)

- **int getreactions (char *linein, char *singleword, species *listspec, int *Nspec, reaction *listreac, int *Nreac, char *aunits, char *eunits, int *ierror)**
  Interprets a character string containing reaction description.

- **int verifyreac (element *listelem, int *Nelem, species *listspec, int *Nspec, reaction *listreac, int *Nreac, int *ierror)**
  Verifies correctness and completeness for all reactions in the list.

- **int rescalereac (reaction *listreac, int *Nreac)**
  Verifies correctness and completeness for all reactions in the list.

- **int out_formatted (element *listelem, int *Nelem, species *listspec, int *Nspec, reaction *listreac, int *Nreac, char *aunits, char *eunits, FILE *fileascii)**
  Outputs reaction data to ascii file.

- **int out_unformatted (element *listelem, int *Nelem, species *listspec, int *Nspec, reaction *listreac, int *Nreac, char *aunits, char *eunits, FILE *filelist, int *ierror)**
  Outputs reaction data to an unformatted ascii file.

- **void errormsg (int ierror)**
  Outputs error messages.

- **int elimleads (char *linein)**
  Checks if a string of characters contains leading spaces. Then shifts the string left over the leading spaces, and marks the remaining space at the right with null characters.

- **int elimends (char *linein)**
  Checks if a string of characters contains trailing spaces. Marks all those positions with null characters.
• int elimspaces (char *linein)
  Eliminates space characters from a string.
• int elimcomm (char *linein)
  Eliminates comments: advances through a line of characters, determines the first occurrence of "!" (if any), then nulls out all the positions downstream (including the "!")
• int tab2space (char *linein)
  Replaces all horizontal tab, vertical tab, line feed, and carriage return characters in a line with spaces.
• int extractWordLeft (char *linein, char *oneword)
  Extracts the left most word from a character string.
• int extractWordLeftAuxline (char *linein, char *oneword, char *twoword, int *inum, int *ierror)
  Extracts two strings from a character strings.
• int extractWordLeftNoslash (char *linein, char *oneword)
  The only difference between this method and "extractWordLeft" is the absence of "/" as delimiter.
• int extractWordRight (char *linein, char *oneword)
  Extracts last word from a character strings: (1) assumes the word is separated from the rest of the string by at least a space; (2) the corresponding positions in the initial string are filled with null characters.
• int extractdouble (char *wordval, double *dvalues, int *inum, int *ierror)
  Extracts a double number from a character string: (1) the number is assumed to be the left most word in the string; (2) words are separated by spaces.
• void wordtoupper (char *linein, char *oneword, int Npos)
  Converts all letters in a character string to uppercase.
• void cleancharstring (char *linein, int *len1)
  Performs various operations on a character strings (see explanations for individual methods)
• int charfixespc (char *singleword, int *len1)
• int checkstrnum (char *singleword, int *len1, int *ierror)
  Checks if all components of a charcater string are valid number characters (as described by the f or e formats)
• int findnonnum (char *specname, int *ipos)
  Identifies the first position in the character string that does not correspond to a positive f format. (in other words, finds the first position that is not a digit or a decimal point)
• int kmodsum (element *listelem, int *Nelem, species *listspec, int *Nspec, reaction *listreac, int *Nreac, int *nlonEspec, int *elecIdx, int *nlonSpec, int *maxSpecInReac, int *maxThlnReac, int *maxOrdPar, int *nFallPar, int *maxTpRange, int *NliReac, int *nRltReac, int *nFallReac, int *nThBrReac, int *nRevReac, int *nHeReac, int *nTdepReac, int *nJanReac, int *nFit1Reac, int *nExcReac, int *nMomeReac, int *nXsmiReac, int *nRealNuReac, int *nOrdReac, int *nNASAInter, int *nCpCoef, int *nNASAfit, int *nArhPar, int *nLtpar, int *nJanPar, int *nFit1Par)
kinetic model summary

- `int out_mathem (element *listelem, int *Nelem, species *listspec, int *Nspec, reaction *listreac, int *Nreac, char *aunits, char *eunits)`
  
  Outputs reaction data to ascii file.

7.6.1 Detailed Description

Collection of functions used to parse kinetic models from files. TC_kmodint - utility used to parse kinetic models

Usage: `TC_kmodint (char *mechfile, int *lmech, char *thermofile, int *lthrm)`

- `mechfile`: file containing the kinetic model
- `lmech`: length of the character string above (introduced to enable passing of character strings from Fortran to C)
- `thermofile`: file containing thermodynamic properties (NASA polynomials)
- `lmech`: length of the character string thermofile (introduced to enable passing of character strings from Fortran to C)

Output:

- `kmod.out`: ascii file containing kinetic model info formatted for visual inspection
- `kmod.list`: ascii file containing unformatted data for tchem

Brief description of kinetic model input format

Elements:

- Number of elements is "unlimited"
- Elements not present in file periodictable.dat must be followed by their atomic weight, e.g. N+ /14.0010/
- Element names are one or two characters long
- Any duplicate listing of an element is ignored

Species:

- Number of species is "unlimited"
• Species need to be formed only of elements declared in the list of elements

• Species names are "LENGTHOFSPECNAME" characters long

• Any duplicate listing of an species is ignored

• A species can contain at most "NUMBEROFELEMINSPEC" distinct elements

**Thermodynamic data:**

• Data can be provided in the kinetic model file and/or the thermodynamic file;

• Currently, only NASA polynomials are accepted; two (2) temperature intervals

• Data needs to be provided for all species

**Reactions:**

• Number of reactions is "unlimited"

• Pre-exponential factor units MOLES or MOLECULES; default is MOLES

• Activation energy units: CAL/MOLE, KCAL/MOLE, JOULES/ MOLE, KJOULES/-MOLE, KELVINS, eVOLTS; default is CAL/MOLE. Units are converted to KELVINS if necessary; conversion factors are based on NIST data as of July 2007

• maximum number of reactants or products is "NSPECREACMAX"

• reactants and products are separated by "<=>" or "=" (reversible reactions) or "=>" (irreversible reactions)

• species are separated by "+"

• three Arrhenius parameters should be given for each reaction in the order: pre-exponential factor, temperature exponent, activation energy

• reaction lines that are too long can be split on several lines using the character "&" at the end of each line

**Auxiliary reaction info:**

• Auxiliary data needs to be provided immediately following the reaction to which it corresponds to

• Any keywords except DUPLICATE, MOME, and XSMI need to be followed by numerical values enclosed between "/"

• Duplicate reactions

**DUPLICATE**
• third-body efficiencies for reactions containing "+M" (not "+(M)" ) as a reactant and/or product:
  speciesname /value/ the maximum number of third-body efficiencies is given by "NTHRDBMAX"

• pressure-dependent reaction are signaled by the inclusion of "(M)" as a reactant and/or product or by the inclusion of a particular species, e.g. "(H2)" as a reactant and/or product. Some of the following parameters are required to describe the pressure dependency:
  LOW /value1 value2 value3/
  HIGH /value1 value2 value3/
  TROE /value1 value2 value3 value4/ (if value4 is ommitted then the corresponding term is ommitted in the corresponding Troe formulation)
  SRI /value1 value2 value3 value4 value5/ (if value4 and value5 are ommitted then value4=1.0, value5=0.0)

• Landau-Teller reactions
  LT /value1 value2/ for the forward rate
  RLT /value1 value2/ for the reverse rate. If REV is given then RLT is mandatory; if not then RLT is optional

• Additional rate fit expressions:
  JAN /value1 value2 ... value9/
  FIT1 /value1 value2 value3 value4/

• Radiation wavelength for reactions containing HV as a reactant and/or product
  HV /value1/

• Reaction rate dependence on a particular species temperature
  TDEP /speciename/
  – Energy loss parameter
  EXCI /value1/

• Plasma (Ion) momentum-transfer collision frequency
  MOME (XSMI)

• Reverse reaction Arrhenius parameters
  REV /value1 value2 value3/

• Change reaction order parameters
  FORD /specname value1/ (for forward rate)
  RORD /specname value1/ (for reverse rate)
• Reaction units for reactions with units different than most of the other reactions
  
  UNITS /unit1 unit2/
  
  (the number of keywords between "//" can be one if only one set of units is changed or two if both pre-exponential factor and activation energy are to be modified)

7.6.2 Function Documentation

7.6.2.1 void checkeleminlist (char * elemname, element * listelem, int * Nelem, int * ipos)

Returns index of an element in the list of elements:

• the index goes from 0 to (Nelem-1);
• the value of Nelem is returned if the element is not found

Referenced by getthermo().

7.6.2.2 int extractWordLeft (char * linein, char * oneword)

Extracts the left most word from a character string.

• this function assumes words are separated by spaces or "//"
• the initial character string is shifted to the left starting with the separation character
• the corresponding positions left at the right are filled with null characters

References elimleads().
Referenced by getelements(), getspecies(), getthermo(), and TC_kmodint().

7.6.2.3 int extractWordLeftauxline (char * linein, char * oneword, char * twoword, int * inum, int * ierror)

Extracts two strings from a character strings.

• the first string starts from the first position until a space or a "//"
• the second string is starts after the first slash and ends at the second "//"
  – the initial character string is shifted to the left starting with the first character after the second "//"
• the corresponding positions left at the right are filled with null characters

References elimleads().
Referenced by getreacauxl().

7.6.4. int getreactions ( char * linein, char * singleword, species * listspec, int * Nspec,
reaction * listreac, int * Nreac, char * aunits, char * eunits, int * ierror )

Interprets a character string containing reaction description.

• decides if the character string describes a reaction or the auxiliary information
associated with one

References getreacauxl(), getreacline(), and resetreacdata().
Referenced by TC_kmodint_().

7.6.5. void setperiodictable ( elemtable * periodictable, int * Natoms, int iflag )

Read periodic table.

• First line contains two integer values: the total number of elements and the num-
ber of elements listed on each of the following lines

• The following lines (an even number) contain lists of elements names (two char-
acters separated by one of more spaces, and elemental masses (separated by
spaces):

1. S1 S2 ... S(Nline)
2. M1 M2 ... M(Nline)
3. S(Nline+1) S(Nline+2) ....
4. M(Nline+1) M(Nline+2) ....

Referenced by TC_kmodint_().

7.6.6. int tab2space ( char * linein )

Replaces all horizontal tab, vertical tab, line feed, and carriage return characters in a
line with spaces.

• ASCII code for a hortizontal TAB is 9
• ASCII code for a vertical TAB is 11
• ASCII code for a SPACE is 32
• ASCII code for line feed (new line) is 10
• ASCII code for carriage return is 15

Referenced by cleancharstring().

7.7 TC_mlms.c File Reference

Functions

• int TCDND_getMs2Cc (double *scal, int Nvars, double *concX)
  Computes molar concentrations based on temperature and species mass fractions. Input temperature is normalized, output concentrations are also normalized before exit.

\[
[X_k] = [X_k] \cdot \frac{\rho_{ref}}{W_k} = Y_k \cdot \frac{\rho}{W_k} \cdot \frac{W_{ref}}{\rho_{ref}}
\]

• int TC_getMs2Cc (double *scal, int Nvars, double *concX)
  Computes molar concentrations based on temperature and species mass fractions.

\[
[X_k] = Y_k \cdot \frac{\rho}{W_k}
\]

• int TCDND_getMl2Ms (double *Xspec, int Nspec, double *Yspec)
  Transforms mole fractions to mass fractions (same as TC_getMl2Ms()).

\[
Y_k = X_k \cdot \frac{W_k}{W_{mix}}
\]

• int TC_getMl2Ms (double *Xspec, int Nspec, double *Yspec)
  Transforms mole fractions to mass fractions.

\[
Y_k = X_k \cdot \frac{W_k}{W_{mix}}
\]

• int TCDND_getMs2Ml (double *Yspec, int Nspec, double *Xspec)
  Transforms mass fractions to mole fractions (same as TC_getMs2Ml()).

\[
X_k = Y_k \cdot \frac{W_{mix}}{W_k}
\]
• int TC_getMs2Ml (double *Yspec, int Nspec, double *Xspec)
  Transforms mass fractions to mole fractions.
  \[ X_k = Y_k \cdot W_{mix}/W_k \]

• int TCDND_getMs2Wmix (double *Yspec, int Nspec, double *Wmix)
  Computes mixture molecular weight based on species mass fractions. The molecular weight ([kg/kmol]=[g/mol]) is normalized before output.

\[
W_{mix} = \frac{W_{mix}}{W_{ref}} = \left( \frac{1}{\sum_{k=1}^{N_{spe}} Y_k/W_k} \right)^{-1}
\]

• int TC_getMs2Wmix (double *Yspec, int Nspec, double *Wmix)
  Computes mixture molecular weight based on species mass fractions.

\[
W_{mix} = \left( \sum_{k=1}^{N_{spe}} Y_k/W_k \right)^{-1}
\]

• int TCDND_getMl2Wmix (double *Xspec, int Nspec, double *Wmix)
  Computes mixture molecular weight based on species mole fractions. The molecular weight ([kg/kmol]=[g/mol]) is normalized before output.

\[
\bar{W}_{mix} = \frac{W_{mix}}{W_{ref}} = \frac{1}{W_{ref}} \sum_{k=1}^{N_{spe}} X_kW_k
\]

• int TC_getMl2Wmix (double *Xspec, int Nspec, double *Wmix)
  Computes mixture molecular weight based on species mole fractions.

\[
W_{mix} = \sum_{k=1}^{N_{spe}} X_kW_k
\]

7.7.1 Detailed Description

7.7.2 Function Documentation

7.7.2.1 int TC_getMl2Ms ( double *Xspec, int Nspec, double *Yspec )

Transforms mole fractions to mass fractions.

\[ Y_k = X_k \cdot W_k/W_{mix} \]
Parameters

\begin{tabular}{|l|}
\hline
Xspec & : array of Nspec mole fractions \\
Nspec & : no. of species \\
\hline
\end{tabular}

Returns

Yspec : array of Nspec mass fractions

References TC_getMi2Wmix(), TC_Nspec_, and TC_sMass_.
Referenced by TCDND_getMi2Ms().

7.7.2.2  int TC_getMi2Wmix ( double * Xspec, int Nspec, double * Wmix )

Computes mixture molecular weight based on species mole fractions.

\[ W_{mix} = \sum_{k=1}^{N_{spec}} X_k W_k \]

Parameters

\begin{tabular}{|l|}
\hline
Xspec & : array of Nspec mole fractions \\
Nspec & : no. of species \\
\hline
\end{tabular}

Returns

Wmix : pointer to mixture molecular weight [kg/kmol]=[g/mol]

References TC_Nspec_, and TC_sMass_.
Referenced by TC_getMi2Ms().

7.7.2.3  int TC_getMs2Cc ( double * scal, int Nvars, double * concX )

Computes molar concentrations based on temperature and species mass fractions.

\[ [X_k] = Y_k \cdot \rho / W_k \]

Parameters

\begin{tabular}{|l|}
\hline
scal & : array of Nspec +1 doubles (T,Y_1 ,Y_2 ,...,Y_{Nspec }), temperature T [K], mass fractions Y [] \\
Nvars & : no. of variables = Nspec +1 \\
\hline
\end{tabular}
Returns

\[ \text{concX} : \text{array of doubles containing species molar concentrations [kmol/m}^3\text{]} \]

References TC_getRhoMixMs(), TC_Nspec_, TC_Nvars_, and TC_sMass_.
Referenced by TC_getJacRPTYNanl(), TC_getJacRPTYNnum(), TC_getRfrb(), TC_getRops(), TC_getTY2RRml(), TC_getTY2RRms(), and TCDND_getMs2Cc().

7.7.2.4 int TC_getMs2Ml ( double * Yspec, int Nspec, double * Xspec )

Transforms mass fractions to mole fractions.

\[ X_k = Y_k \cdot W_{mix}/W_k \]

Parameters

<table>
<thead>
<tr>
<th>Yspec</th>
<th>array of Nspec mass fractions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nspec</td>
<td>no. of species</td>
</tr>
</tbody>
</table>

Returns

\[ \text{Xspec} : \text{array of Nspec mole fractions} \]

References TC_getMs2Wmix(), TC_Nspec_, and TC_sMass_.
Referenced by TCDND_getMs2Ml().

7.7.2.5 int TC_getMs2Wmix ( double * Yspec, int Nspec, double * Wmix )

Computes mixture molecular weight based on species mass fractions.

\[ W_{mix} = \left( \sum_{k=1}^{N_{spec}} Y_k/W_k \right)^{-1} \]

Parameters

<table>
<thead>
<tr>
<th>Yspec</th>
<th>array of Nspec mass fractions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nspec</td>
<td>no. of species</td>
</tr>
</tbody>
</table>
Returns

Wmix : pointer to mixture molecular weight [kg/kmol]=[g/mol]

References TC_Nspec_, and TC_sMass_.

Referenced by TC_getJacTYN(), TC_getJacTYNanl(), TC_getJacTYNm1(), TC_getJacTYNm1anl(), TC_getMs2MI(), TC_getSrcCons(), TCDND_getMs2Wmix(), and TCDND_getMs2Wmix().

7.7.2.6 int TCDND_getMl2Ms ( double *Xspec, int Nspec, double *Yspec )

Transforms mole fractions to mass fractions (same as TC_getMl2Ms()).

\[ Y_k = X_k \cdot \frac{W_k}{W_{mix}} \]

Parameters

<table>
<thead>
<tr>
<th>Xspec</th>
<th>: array of Nspec mole fractions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nspec</td>
<td>: no. of species</td>
</tr>
</tbody>
</table>

Returns

Yspec : array of Nspec mass fractions

References TC_getMl2Ms(), and TC_Nspec_.

7.7.2.7 int TCDND_getMl2Wmix ( double *Xspec, int Nspec, double *Wmix )

Computes mixture molecular weight based on species mole fractions. The molecular weight ([kg/kmol]=[g/mol]) is normalized before output.

\[ \bar{W}_{mix} = \frac{W_{mix}}{W_{ref}} = \frac{1}{W_{ref}} \sum_{k=1}^{N_{spec}} X_k W_k \]

Parameters

<table>
<thead>
<tr>
<th>Xspec</th>
<th>: array of Nspec mole fractions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nspec</td>
<td>: no. of species</td>
</tr>
</tbody>
</table>
Returns

Wmix : pointer to normalized mixture molecular weight

References TC_getMs2Wmix(), and TC_Nspec_.

7.7.2.8 int TCDND_getMs2Cc ( double * scal, int Nvars, double * concX )

Computes molar concentrations based on temperature and species mass fractions. Input temperature is normalized, output concentrations are also normalized before exit.

\[
[X_k] = [X_k] \cdot \frac{W_{ref}}{\rho_{ref}} = Y_k \cdot \frac{\rho}{W_k} \cdot \frac{W_{ref}}{\rho_{ref}}
\]

Parameters

<table>
<thead>
<tr>
<th>scal</th>
<th>array of Nspec +1 doubles (T,Y_1,Y_2,...,Y_Nspec), temperature T [K], mass fractions Y[]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nvars</td>
<td>no. of variables = Nspec +1</td>
</tr>
</tbody>
</table>

Returns

concX : array of doubles containing species molar concentrations [kmol/m^3]

References TC_getMs2Cc(), TC_Nspec_, and TC_Nvars_.

7.7.2.9 int TCDND_getMs2Ml ( double * Yspec, int Nspec, double * Xspec )

Transforms mass fractions to mole fractions (same as TC_getMs2Ml())

\[
X_k = Y_k \cdot \frac{W_{mix}}{W_k}
\]

Parameters

<table>
<thead>
<tr>
<th>Yspec</th>
<th>array of Nspec mass fractions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nspec</td>
<td>no. of species</td>
</tr>
</tbody>
</table>

Returns

Xspec : array of Nspec mole fractions

References TC_getMs2Ml(), and TC_Nspec_.

Generated on Sun Nov 27 2011 21:48:52 for TChem by Doxygen
7.7.2.10 int TCDNDC_getMs2Wmix ( double * Yspec, int Nspec, double * Wmix )

Computes mixture molecular weight based on species mass fractions. The molecular weight \([\text{kg/kmol}]=\text{[g/mol]}\) is normalized before output.

\[
\bar{W}_{\text{mix}} = \frac{W_{\text{mix}}}{W_{\text{ref}}} = \frac{1}{W_{\text{ref}}} \left( \sum_{k=1}^{N_{\text{spec}}} \frac{Y_{k}}{W_{k}} \right)^{-1}
\]

Parameters

<table>
<thead>
<tr>
<th>Yspec</th>
<th>array of Nspec mass fractions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nspec</td>
<td>no. of species</td>
</tr>
</tbody>
</table>

Returns

Wmix : pointer to normalized mixture molecular weight

References TC_GetMs2Wmix(), and TC_Nspec_.

7.8.1 Detailed Description

Definitions of parameters and constants.

7.8.2 Define Documentation

7.8.2.1 #define ATMPA 101325.0

Standard atmospheric pressure \([Pa]\)
Referenced by TC_initChem().

7.8.2.2 #define CALJO 4.184

Conversion from calories to Joule
Referenced by rescalerac(), and TC_initChem().

7.8.2.3 #define EVOLT 1.60217653E-19

electron volt (eV) unit \([J]\)
Referenced by rescalerac().

7.8.2.4 #define KBOLT 1.3806504E-23

Boltzmann's constant \((k_B)\) \([JK^{-1}]\)
Referenced by rescalerac().

7.8.2.5 #define LENGTHOFELEMNAME 3

Maximum number of characters for element names
Referenced by TC_initChem().

7.8.2.6 #define LENGTHOFSPECNAME 18

Maximum number of characters for species names
Referenced by getreacline(), getspecies(), TC_getSnameLen(), TC_getSnames(), TC_getSpos(), and TC_initChem().
7.8.2.7  
#define MAX( A, B ) ( ((A) > (B)) ? (A) : (B) )

Maximum of two expressions
Referenced by kmodsum().

7.8.2.8  
#define MIN( A, B ) ( ((A) < (B)) ? (A) : (B) )

Minimum of two expressions
Referenced by TC_kmodint().

7.8.2.9  
#define NAVOG 6.02214179E23

Avogadro's number
Referenced by rescalereac().

7.8.2.10  
#define NSPECREACMAX 6

Maximum number of reactant or product species in a reaction
Referenced by getreacauxl(), getreacline(), out_formatted(), out_mathem(), out_unformatted(), rescalereac(), resetreacdata(), and verifyreac().

7.8.2.11  
#define NTHRDBMAX 10

Maximum number of third body efficiencies
Referenced by getreacauxl(), and resetreacdata().

7.8.2.12  
#define NUMBEROFELEMINSPEC 5

Maximum number of (different) elements that compose a species
Referenced by resetspecdata().

7.8.2.13  
#define REACBALANCE 1.e-4

Threshold for checking reaction balance with real stoichiometric coefficients
Referenced by out_formatted(), out_unformatted(), and verifyreac().
#define RUNIV 8.314472

Universal gas constant $J/(mol \cdot K)$

Referenced by rescalereac(), and TC_initChem().

## 7.9 TC_rr.c File Reference

Reaction rate functions.

### Functions

- int **TC_getNreac()**
  
  Returns number of reactions $N_{\text{reac}}$.

- int **TC_getStoiCoef** (int Nspec, int Nreac, double *stoicoef)
  
  Returns stoichiometric coefficients’ matrix. The stoichiometric coefficient for species $j$ in reaction $i$ is stored at position $i \cdot N_{\text{spec}} + j$. It assumes that stoicoef was dimensioned to at least $N_{\text{reac}} \cdot N_{\text{spec}}$.

- int **TC_getStoiCoefReac** (int Nspec, int Nreac, int ireac, int idx, double *stoicoef)
  
  Returns stoichiometric coefficients’ array for reaction ‘ireac’ for either reactants (idx=0) or products (idx=1) The stoichiometric coefficient for species “j” in reaction “ireac” is stored at position $j$. It assumes that stoicoef was dimensioned to at least $N_{\text{spec}}$.

- int **TC_getArhenFor** (int ireac, int ipos, double *val)
  
  Return current value of the Arrhenius parameters for forward rate constants. Return -1 if no data available, otherwise return 0 and store value in val.

- int **TC_getArhenRev** (int ireac, int ipos, double *val)
  
  Return current value of the Arrhenius parameters for reverse rate constants. Return -1 if no data available, otherwise return 0 and store value in val.

- int **TCDND_getTY2RRml** (double *scal, int Nvars, double *omega)
  
  Returns non-dimensional molar reaction rates, $\dot{\omega}_i \cdot \frac{W_{\text{ref}}}{\rho_{\text{ref}}}$, based on $T$ and $Y$’s.

- int **TC_getTY2RRml** (double *scal, int Nvars, double *omega)
  
  Returns molar reaction rates, $\dot{\omega}_i$, based on $T$ and $Y$’s.

- int **TCDND_getTY2RRms** (double *scal, int Nvars, double *omega)
  
  Returns non-dimensional mass reaction rates based on $T$ and $Y$’s.

- int **TC_getTY2RRms** (double *scal, int Nvars, double *omega)
  
  Returns mass reaction rates based on $T$ and $Y$’s.

- int **TCDND_getTXC2RRml** (double *scal, int Nvars, double *omega)
  
  Returns non-dimensional molar reaction rates based on temperature $T$ and molar concentrations $X_C$.

- int **TC_getTXC2RRml** (double *scal, int Nvars, double *omega)
Returns molar reaction rates based on temperature $T$ and molar concentrations $XC$. 

- int TCDND_getTXC2RRms (double *scal, int Nvars, double *omega)
  Returns non-dimensional mass reaction rates based on $T$ and molar concentrations.

- int TC_getTXC2RRms (double *scal, int Nvars, double *omega)
  Returns mass reaction rates based on $T$ and molar concentrations.

- int TC_getRops (double *scal, int Nvars, double *datarop)
  Returns rate-of-progress variables based on temperature $T$ and species mass fractions $Y$’s.

- int TC_getRfrb (double *scal, int Nvars, double *dataRfrb)
  Returns forward and reverse rate-of-progress variables based on $T$ and $Y$’s.

- int TC_getRopsLocal (double *scal)
- int TC_getReacRates (double *scal, int Nvars, double *omega)
  Returns molar reaction rates, $\dot{\omega}$, based on $T$ and molar concentrations $XC$’s (semi-private function)

- int TC_getgk (double t1, double t_1, double tln)
- int TC_getgkFcn (double t1, double t_1, double tln)
- int TC_getgkTab (double t1)
- int TC_getgkp (double t1, double t_1, double tln)
- int TC_getgkpFcn (double t1, double t_1, double tln)
- int TC_getgkpTab (double t1)
- double TC_getSumNuGk (int i, double *gkLoc)
- double TC_getSumRealNuGk (int i, int ir, double *gkLoc)
- int TC_get3rdBdyConc (double *concX, double *concM)
- int TC_getkForRev (double t1, double t_1, double tln)
- int TC_getkForRevFcn (double t_1, double tln)
- int TC_getkForRevTab (double t1)
- int TC_getkForRevP (double t1, double t_1)
- int TC_getkForRevPFcn (double t_1)
- int TC_getkForRevPTab (double t1)
- int TC_getRateofProg (double *concX)
- int TC_getRateofProgDer (double *concX, int ireac, int ispec, double *qfr)
- int TC_getCrnd (double t1, double t_1, double tln, double *concX, double *concM)
- int TC_getCrndDer (int ireac, int *itbdy, int *ipfal, double t1, double t_1, double tln, double *concX, double *concM)

### 7.9.1 Detailed Description

Reaction rate functions.
7.9.2 Function Documentation

7.9.2.1 int TC_getArhenFor ( int ireac, int ipos, double * val )

Return current value of the Arrhenius parameters for forward rate constants. Return -1 if no data available, otherwise return 0 and store value in val.

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ireac</td>
<td>reaction index</td>
</tr>
<tr>
<td>ipos</td>
<td>index of Arrhenius parameter (0) pre-exponential factor, (1) temperature exponent, (2) activation energy</td>
</tr>
<tr>
<td>*val</td>
<td>value of Arrhenius parameter</td>
</tr>
</tbody>
</table>

References TC_Nreac_.

7.9.2.2 int TC_getArhenRev ( int ireac, int ipos, double * val )

Return current value of the Arrhenius parameters for reverse rate constants. Return -1 if no data available, otherwise return 0 and store value in val.

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ireac</td>
<td>reaction index</td>
</tr>
<tr>
<td>ipos</td>
<td>index of Arrhenius parameter (0) pre-exponential factor, (1) temperature exponent, (2) activation energy</td>
</tr>
<tr>
<td>*val</td>
<td>value of Arrhenius parameter</td>
</tr>
</tbody>
</table>

References TC_nRevReac_.

7.9.2.3 int TC_getReacRates ( double * scal, int Nvars, double * omega )

Returns molar reaction rates, \( \dot{\omega}_i \), based on T and molar concentrations XC's (semi-private function)

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>scal</td>
<td>array of ( N_{spec} + 1 ) doubles ((T, XC_1, XC_2, ..., XC_N)): temperature T [K], molar concentrations XC [( kmol/m^3 )]</td>
</tr>
<tr>
<td>Nvars</td>
<td>no. of variables ( N_{vars} = N_{spec} + 1 )</td>
</tr>
</tbody>
</table>
7.9 TC_rr.c File Reference

Returns

\[ \omega : \text{array of } N_{\text{spec}} \text{ molar reaction rates } \dot{\omega}_i \left[ kmol/(m^3 \cdot s) \right] \]

References TC_maxSpecInReac_, TC_Nreac_, TC_nRealNuReac_, and TC_Nspec_.
Referenced by TC_getTXC2RRml(), TC_getTXC2RRms(), TC_getTY2RRml(), and TC_getTY2RRms().

7.9.2.4 int TC_getRfrb ( double *scal, int Nvars, double *dataRfrb )

Returns forward and reverse rate-of-progress variables based on T and Y's.

Parameters

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>scal</td>
<td>array of Nspec+1 doubles (T,Y_1,Y_2,...,Y_N) temperature T [K], mass fractions Y []</td>
</tr>
<tr>
<td>Nvars</td>
<td>no. of variables = Nspec + 1</td>
</tr>
</tbody>
</table>

Returns

\[ \text{datarop : array of } N_{\text{reac}} \text{ forward rate-of-progress variables and } N_{\text{reac}} \text{ reverse rate-of-progress variables } [\text{kmol/(m}^3\cdot\text{s})] \]

References TC_errorMSG(), TC_getMs2Cc(), TC_Nreac_, TC_Nspec_, and TC_Nvars_.

7.9.2.5 int TC_getRops ( double *scal, int Nvars, double *datarop )

Returns rate-of-progress variables based on temperature T and species mass fractions Y's.

Parameters

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>scal</td>
<td>array of Nreac+1 doubles (T,Y_1,Y_2,...,Y_N) temperature T [K], mass fractions Y []</td>
</tr>
<tr>
<td>Nvars</td>
<td>no. of variables = Nspec + 1</td>
</tr>
</tbody>
</table>

Returns

\[ \text{datarop : array of } N_{\text{reac}} \text{ rate-of-progress variables } [\text{kmol/(m}^3\cdot\text{s})] \]

References TC_errorMSG(), TC_getMs2Cc(), TC_Nreac_, TC_Nspec_, and TC_Nvars_.

Generated on Sun Nov 27 2011 21:48:52 for TChem by Doxygen
7.9.2.6 int TC_getStoiCoef ( int Nspec, int Nreac, double * stoicoef )

Returns stoichiometric coefficients' matrix. The stoichiometric coefficient for species "j" in reaction "i" is stored at position $i \cdot N_{spec} + j$. It assumes that stoicoef was dimensioned to at least $N_{reac} \cdot N_{spec}$.

Parameters

<table>
<thead>
<tr>
<th>Nspec</th>
<th>: no. of species</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nreac</td>
<td>: no. of reactions</td>
</tr>
</tbody>
</table>

Returns

stoicoef : array of stoichiometric coefficients

References TC_errorMSG(), TC_maxSpecInReac_, TC_Nreac_, TC_nRealNuReac_, and TC_Nspec_.

7.9.2.7 int TC_getStoiCoefReac ( int Nspec, int Nreac, int ireac, int idx, double * stoicoef )

Returns stoichiometric coefficients' array for reaction 'ireac' for either reactants (idx=0) or products (idx=1) The stoichiometric coefficient for species "j" in reaction "ireac" is stored at position $j$. It assumes that stoicoef was dimensioned to at least $N_{spec}$.

Parameters

<table>
<thead>
<tr>
<th>Nspec</th>
<th>: no. of species</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nreac</td>
<td>: no. of reactions</td>
</tr>
<tr>
<td>ireac</td>
<td>: reaction index</td>
</tr>
<tr>
<td>idx</td>
<td>: 0-reactants, 1-products</td>
</tr>
</tbody>
</table>

Returns

stoicoef : array of stoichiometric coefficients

References TC_errorMSG(), TC_maxSpecInReac_, TC_Nreac_, TC_nRealNuReac_, and TC_Nspec_.

7.9.2.8 int TC_getTXC2RRml ( double * scal, int Nvars, double * omega )

Returns molar reaction rates based on temperature T and molar concentrations XC.
Parameters

<table>
<thead>
<tr>
<th>scal</th>
<th>array of Nspec + 1 doubles (T, XC_1, XC_2, ..., XC_N) temperature T [K], molar concentrations XC [kmol/m3]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nvars</td>
<td>no. of variables = Nspec + 1</td>
</tr>
</tbody>
</table>

Returns

omega : array of Nspec (molar) reaction rates [kmol/(m3.s)]

References TC_errorMSG(), TC_getReacRates(), TC_Nspec_, and TC_Nvars_.
Referenced by TCDND_getTXC2RRml().

7.9.2.9 int TC_getTXC2RRml ( double * scal, int Nvars, double * omega )

Returns mass reaction rates based on T and molar concentrations.

Parameters

<table>
<thead>
<tr>
<th>scal</th>
<th>array of Nspec+1 doubles (T, XC_1, XC_2, ..., XC_N) temperature T [K], molar concentrations XC [kmol/m3]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nvars</td>
<td>no. of variables = Nspec + 1</td>
</tr>
</tbody>
</table>

Returns

omega : array of Nspec (mass) reaction rates [kg/(m3.s)]

References TC_errorMSG(), TC_getReacRates(), TC_Nspec_, TC_Nvars_, and TC_s-Mass_.
Referenced by TC_getJacRPTYNnum(), and TCDND_getTXC2RRms().

7.9.2.10 int TC_getTY2RRml ( double * scal, int Nvars, double * omega )

Returns molar reaction rates, $\dot{\omega}_i$, based on T and Y's.

Parameters

<table>
<thead>
<tr>
<th>scal</th>
<th>array of $N_{spec} + 1$ doubles ($T, Y_1, Y_2, ..., Y_N$): temperature T [K], mass fractions Y []</th>
</tr>
</thead>

Returns

\[ \omega : \text{array of } N_{\text{spec}} \text{ molar reaction rates } \omega_i \left[ \frac{\text{kmol}}{(m^3 \cdot s)} \right] \]

References TC_errorMSG(), TC_getMs2Cc(), TC_getReacRates(), TC_Nspec_, and TC_Nvars_.

Referenced by TC_getSrcCons(), and TCDND_getTY2RRml().

7.9.2.11 int TC_getTY2RRms ( double * scal, int Nvars, double * omega )

Returns mass reaction rates based on \( T \) and \( Y \)'s.

Parameters

\begin{array}{|l|}
\hline
\text{scal} & : \text{array of } N_{\text{spec}} + 1 \text{ doubles (} T, Y_1, Y_2, \ldots, Y_N \text{)} \text{ temperature } T \ [\text{K}], \\
& \text{mass fractions } Y \ [\] \\
Nvars & : \text{no. of variables } = N_{\text{spec}} + 1 \\
\hline
\end{array}

Returns

\[ \omega : \text{array of } N_{\text{spec}} \text{ mass reaction rates } \left[ \frac{\text{kg}}{(m^3 \cdot s)} \right] \]

References TC_errorMSG(), TC_getMs2Cc(), TC_getReacRates(), TC_Nspec_, TC_Nvars_, and TC_sMass_.

Referenced by TC_getSrc(), and TCDND_getTY2RRms().

7.9.2.12 int TCDND_getTXC2RRml ( double * scal, int Nvars, double * omega )

Returns non-dimensional molar reaction rates based on temperature \( T \) and molar concentrations \( XC \).

Parameters

\begin{array}{|l|}
\hline
\text{scal} & : \text{array of } N_{\text{spec}} + 1 \text{ doubles (} T, XC_1, XC_2, \ldots, XC_N \text{)} \text{ temperature } T \ [\text{K}], \\
& \text{molar concentrations } XC \ [\text{kmol} / \text{m}^3] \text{ (but non-dimensional)} \\
Nvars & : \text{no. of variables } = N_{\text{spec}} + 1 \\
\hline
\end{array}

Returns

\[ \omega : \text{array of } N_{\text{spec}} \text{ (molar) reaction rates } \left[ \frac{\text{kmol}}{(m^3 \cdot s)} \right] \text{ (but non-dimensional)} \]

References TC_errorMSG(), TC_getTXC2RRml(), TC_Nspec_, and TC_Nvars_.

7.9.2.13 int TCDND_getTXC2RRms ( double * scal, int Nvars, double * omega )

Returns non-dimensional mass reaction rates based on T and molar concentrations.

Parameters

<table>
<thead>
<tr>
<th>scal</th>
<th>array of Nspec +1 doubles (T,XC_1,XC_2,...,XC_N) temperature T [K], molar concentrations XC [kmol/m^3] (but non-dimensional)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nvars</td>
<td>no. of variables = Nspec +1</td>
</tr>
</tbody>
</table>

Returns

omega : array of Nspec (mass) reaction rates [kg/(m^3.s)] (but non-dimensional)

References TC_errorMSG(), TC_getTXC2RRms(), TC_Nspec_, and TC_Nvars_.

7.9.2.14 int TCDND_getTY2RRml ( double * scal, int Nvars, double * omega )

Returns non-dimensional molar reaction rates, \( \dot{\omega}_i \cdot \frac{W_{ref}}{P_{ref}} \), based on T and Y's.

Parameters

<table>
<thead>
<tr>
<th>scal</th>
<th>array of Nspec +1 doubles (T,Y_1,Y_2,...,Y_N) temperature T [K], mass fractions Y []</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nvars</td>
<td>no. of variables = Nspec +1</td>
</tr>
</tbody>
</table>

Returns

omega : array of Nspec molar reaction rates [kmol/(m^3.s)] (but non-dimensional)

References TC_errorMSG(), TC_getTY2RRml(), TC_Nspec_, and TC_Nvars_.

7.9.2.15 int TCDND_getTY2RRms ( double * scal, int Nvars, double * omega )

Returns non-dimensional mass reaction rates based on T and Y's.

Parameters

<table>
<thead>
<tr>
<th>scal</th>
<th>array of Nspec +1 doubles (T,Y_1,Y_2,...,Y_N) temperature T [K], mass fractions Y []</th>
</tr>
</thead>
<tbody>
<tr>

Generated on Sun Nov 27 2011 21:48:52 for TChem by Doxygen
Returns

\( \omega \) : array of \( N_{\text{spec}} \) mass reaction rates [kg/(m\(^3\).s)] (but non-dimensional)

References TC_errorMSG(), TC_getTY2RRms(), TC_Nspec_, and TC_Nvars_.

### 7.10 TC_spec.c File Reference

Species info.

#### Functions

- **int TC_getNspec ()**
  
  Returns no. of species \( N_{\text{spec}} \)

- **int TC_getNelem ()**
  
  Returns no. of elements \( N_{\text{elem}} \)

- **int TC_getNvars ()**
  
  Returns no. of variables \( (N_{\text{spec}} + 1) \)

- **int TC_getSnames (int \( N_{\text{spec}} \), char *sname)**
  
  Returns species names.

- **int TC_getSnameLen ()**
  
  Returns length of species names.

- **int TC_getSpos (const char *sname, const int slen)**
  
  Returns position a species in the list of species.

- **int TC_getSmass (int \( N_{\text{spec}} \), double *\( W_i \))**
  
  Returns species molar weights.

### 7.10.1 Detailed Description

Species info.

### 7.10.2 Function Documentation

#### 7.10.2.1 int TC_getSmass ( int \( N_{\text{spec}} \), double *\( W_i \) )

Returns species molar weights.

<table>
<thead>
<tr>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>( N_{\text{spec}} ) : no. of species</td>
</tr>
</tbody>
</table>

Generated on Sun Nov 27 2011 21:48:52 for TChem by Doxygen
Returns

Wi : array of species molar weights [kg/kmol]=[g/mol]

References TC_Nspec_, and TC_sMass_.

7.10.2.2 int TC_getSnames ( int Nspec, char * snames )
Returns species names.

Parameters

| Nspec | no. of species |

Returns

snames: array of characters containing species names, each name is LENGTHOFSPECNAME characters

References LENGTHOFSPECNAME, TC_Nspec_, and TC_sNames_.

7.10.2.3 int TC_getSpos ( const char * sname, const int slen )
Returns position a species in the list of species.

Parameters

| sname | string containing the name of the species |
| slen | length of species "sname" name |

Returns

position of species sname in the list of species, 0...(Nspec -1)

References LENGTHOFSPECNAME, TC_Nspec_, and TC_sNames_.

7.11 TC_src.c File Reference

Source term and Jacobian functions.

Functions

- int TCDND_getSrc (double *scal, int Nvars, double *omega)
Returns dimensional/non-dimensional source term for
\[
\frac{\partial T}{\partial t} = \alpha_0, \quad \frac{\partial Y_i}{\partial t} = \alpha_i,
\]
based on temperature \( T \) and species mass fractions \( Y \)'s.

- int TC_getSrc (double *scal, int Nvars, double *omega)
  Returns source term for
  \[
  \frac{\partial T}{\partial t} = \alpha_0, \quad \frac{\partial Y_i}{\partial t} = \alpha_i,
  \]
based on temperature \( T \) and species mass fractions \( Y \)'s.

- int TCDND_getSrcCons (double *scal, int Nvars, double *omega)
  Returns source term (dimensional/non-dimensional) for
  \[
  \frac{\partial \rho}{\partial t} = \alpha_0, \quad \rho \frac{\partial Y_i}{\partial t} = \alpha_i,
  \]
based on \( \rho \) and \( Y \)'s.

- int TC_getSrcCons (double *scal, int Nvars, double *omega)
  Returns source term for
  \[
  \frac{\partial \rho}{\partial t} = \alpha_0, \quad \rho \frac{\partial Y_i}{\partial t} = \alpha_i,
  \]
based on \( \rho \) and \( Y \)'s.

- int TCDND_getJacTYNm1anl (double *scal, int Nspec, double *jac)
  Computes analytical Jacobian (dimensional/non-dimensional) for the system
  \((T, Y_1, Y_2, \ldots, Y_{N-1})\) based on temperature \( T \) and species mass fractions \( Y \)'s.

- int TC_getJacTYNm1anl (double *scal, int Nspec, double *jac)
  Computes analytical Jacobian for the system \((T, Y_1, Y_2, \ldots, Y_{N-1})\) based on \( T \) and \( Y \)'s.

- int TCDND_getJacTYNanl (double *scal, int Nspec, double *jac)
  Computes analytical Jacobian (dimensional/non-dimensional) for the system
  \((T, Y_1, Y_2, \ldots, Y_N)\) based on \( T \) and \( Y \)'s.

- int TC_getJacTYNanl (double *scal, int Nspec, double *jac)
  Computes analytical Jacobian for the system \((T, Y_1, Y_2, \ldots, Y_N)\) based on \( T \) and \( Y \)'s.

- int TCDND_getJacTYNm1 (double *scal, int Nspec, double *jac, unsigned int useJacAnl)
  Computes (analytical or numerical) Jacobian (dimensional/non-dimensional) for the system
  \((T, Y_1, Y_2, \ldots, Y_{N-1})\) based on temperature \( T \) and species mass fractions \( Y \)'s.

- int TC_getJacTYNm1 (double *scal, int Nspec, double *jac, unsigned int useJacAnl)
  Computes (analytical or numerical) Jacobian for the system \((T, Y_1, Y_2, \ldots, Y_{N-1})\) based on \( T \) and \( Y \)'s.

- int TCDND_getJacTYN (double *scal, int Nspec, double *jac, unsigned int useJacAnl)
  Computes (analytical or numerical) Jacobian (dimensional/non-dimensional) for the system
  \((T, Y_1, Y_2, \ldots, Y_N)\) based on \( T \) and \( Y \)'s.

- int TC_getJacTYN (double *scal, int Nspec, double *jac, unsigned int useJacAnl)
  Computes (analytical or numerical) Jacobian for the system \((T, Y_1, Y_2, \ldots, Y_N)\) based on \( T \) and \( Y \)'s.
7.12 TC_thermo.c File Reference

Computes (analytical or numerical) Jacobian for the system \((T, Y_1, Y_2, \ldots, Y_N)\) based on \(T\) and \(Y\)’s.

- int TC_getJacRPTYN (double *scal, int Nspec, double *jac, unsigned int useJac-Anl)
  Computes (analytical) Jacobian for the system \((p, P, T, Y_1, Y_2, \ldots, Y_N)\) based on \(T\) and \(Y\)’s.
- int TC_getJacRPTYNanl (double *scal, int Nspec, double *jac)
  Computes analytical Jacobian for the system \((p, P, T, Y_1, Y_2, \ldots, Y_N)\) based on \(T\) and \(Y\)’s.
- int TC_getJacRPTYNnum (double *scal, int Nspec, double *jac)
  Computes numerical Jacobian for the system \((p, P, T, Y_1, Y_2, \ldots, Y_N)\) based on \(T\) and \(Y\)’s.

7.11.1 Detailed Description

Source term and Jacobian functions.

7.12 TC_thermo.c File Reference

Equation of state and thermodynamic functions.

Functions

- int TCDND_getRhoMixMs (double *scal, int Nvars, double *rhomix)
  Computes density based on temperature and species mass fractions using the equation of state. Input temperature is normalized, output density also normalized before exit.
- int TC_getRhoMixMs (double *scal, int Nvars, double *rhomix)
  Computes density based on temperature and species mass fractions using the equation of state.
- int TCDND_getRhoMixMl (double *scal, int Nvars, double *rhomix)
  Computes density based on temperature and species mole fractions using the equation of state. Input temperature is normalized, output density also normalized before exit.
- int TC_getRhoMixMl (double *scal, int Nvars, double *rhomix)
  Computes density based on temperature and species mole fractions using the equation of state.
- int TCDND_getTmixMs (double *scal, int Nvars, double *Tmix)
  Computes temperature based on density and species mass fractions using the equation of state. Input density is normalized, output temperature also normalized before exit.
• int TC_getTmixMs (double *scal, int Nvars, double *Tmix)
  Computes temperature based on density and species mass fractions using the equation of state.

• int TCDND_getTmixMl (double *scal, int Nvars, double *Tmix)
  Computes temperature based on density and species mole fractions using the equation of state. Input density is normalized, output temperature also normalized before exit.

• int TC_getTmixMl (double *scal, int Nvars, double *Tmix)
  Computes temperature based on density and species mole fractions using the equation of state.

• int TCDND_getMs2CpMixMs (double *scal, int Nvars, double *cpmix)
  Computes mixture specific heat at constant pressure based on temperature and species mass fractions. Input temperature is normalized, output specific heat is also normalized before exit.

• int TC_getMs2CpMixMs (double *scal, int Nvars, double *cpmix)
  Computes mixture specific heat at constant pressure based on temperature and species mass fractions.

• int TCDND_getMs2CvMixMs (double *scal, int Nvars, double *cvmix)
  Computes mixture specific heat at constant volume based on temperature and species mass fractions. Input temperature is normalized, output specific heat is also normalized before exit.

• int TC_getMs2CvMixMs (double *scal, int Nvars, double *cvmix)
  Computes mixture specific heat at constant volume based on temperature and species mass fractions.

• int TCDND_getMl2CpMixMl (double *scal, int Nvars, double *cpmix)
  Computes mixture heat capacity at constant pressure based on temperature and species mole fractions. Input temperature is normalized, output specific heat is also normalized before exit.

• int TC_getMl2CpMixMl (double *scal, int Nvars, double *cpmix)
  Computes mixture heat capacity at constant pressure based on temperature and species mole fractions.

• int TCDND_getCpSpecMs (double t, int Nspec, double *cpi)
  Computes species specific heat at constant pressure based on temperature. Input temperature is normalized, output specific heats are also normalized before exit.

• int TC_getCpSpecMs (double t, int Nspec, double *cpi)
  Computes species specific heat at constant pressure based on temperature.

• int TCDND_getCpSpecMl (double t, int Nspec, double *cpi)
  Computes species heat capacities at constant pressure based on temperature. Input temperature is normalized, output heat capacities are also normalized before exit.

• int TC_getCpSpecMl (double t, int Nspec, double *cpi)
  Computes species heat capacities at constant pressure based on temperature.

• int TCDND_getMs2HmixMs (double *scal, int Nvars, double *hmix)
Computes mixture specific enthalpy based on temperature and species mass fractions. Input temperature is normalized, output enthalpy is normalized before exit.

- `int TC_getMs2HmixMs` (double *scal, int Nvars, double *hmix)

Computes mixture molar enthalpy based on temperature and species mass fractions.

- `int TCDND_getMl2HmixMl` (double *scal, int Nvars, double *hmix)

Computes species specific enthalpies based on temperature. Input temperature is normalized, output enthalpies are also normalized before exit.

- `int TC_getHspecMs` (double t, int Nspec, double *hi)

Computes species molar enthalpies based on temperature. Input temperature is normalized, output enthalpies are also normalized before exit.

- `int TCDND_getHspecMl` (double t, int Nspec, double *hi)

Computes species molar enthalpies based on temperature. Input temperature is normalized, output enthalpies are also normalized before exit.

- `int TC_getHspecMl` (double t, int Nspec, double *hi)

Computes species molar enthalpies based on temperature.

- `int TC_getCpSpecMsFcn` (double t, double *cpi)

Computes mixture specific enthalpy based on temperature and species mass fractions. Input temperature is normalized, output enthalpy is normalized before exit.

- `int TC_getCpSpecMs1Fcn` (double t, int i, double *cpi)

- `int TC_getCpSpecMlFcn` (double t, double *cpi)

- `int TC_getCpSpecMsTab` (double t1, double *cpi)

- `int TC_getCpMixMsP` (double *scal, int Nvars, double *cpmix)

- `int TC_getHspecMsFcn` (double t, double *hi)

- `int TC_getHspecMlFcn` (double t, double *hi)

- `int TC_getHspecMsTab` (double t1, double *hi)

- `int TC_getHspecMlTab` (double t1, double *hi)

- `int TC_getCpSpecMsP` (double t, int Nspec, double *cpi)

- `int TC_getCpSpecMsP1Fcn` (double t, int i, double *cpi)

- `int TC_getCpSpecMs1PFcn` (double t, int i, double *cpi)

- `int TC_getCpSpecMsPtab` (double t1, double *cpi)

- `int TC_getHspecMsFcn` (double t, double *hi)

- `int TC_getHspecMlFcn` (double t, double *hi)

- `int TC_getHspecMsTab` (double t1, double *hi)

- `int TC_getHspecMlTab` (double t1, double *hi)

### 7.12.1 Detailed Description

Equation of state and thermodynamic functions.
7.13 TC_utils.c File Reference

Various utilities used by other functions.

Functions

- static double fastIntPow (double val, int exponent)
  
  Much faster version of pow for small integers (considering that reactions are generally no more than 3rd order). The C version of pow requires a double exponent; pow is the slowest part of the code when used instead of fastIntPow.

7.13.1 Detailed Description

Various utilities used by other functions.
